Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Splošni pogoji za vpis na doktorski študij Basic preconditions for doctoral studies

Vsebina:

Content (Syllabus outline):

Les je naravna ligno-celulozna snov, v tehničnem smislu pa anizotropni polimerni kompozit, s širokim spektrom uporabe. Variabilnost in nehomogenost zgradbe lesa, znotraj in med drevesnimi vrstami, odvisna tudi od socio-fizioloških in drugih zunanjih naravnih dejavnikov, zahteva učinkovito, hitro in neinvazivno merjenje njegovih relevantnih

Wood is a natural, lignocellulosic material, in the technical sense an anisotropic polymer composite, with a wide range of uses. The variability and inhomogeneity of wood structure within and between tree species, which also depends on sociophysiological and other external natural factors, requires effective, rapid, and noninvasive

<p>materialnih lastnosti. Potrebe po spremljanju lastnosti lesa segajo od stoječih dreves v gozdnih sestojih, kot tudi pri urbanem drevju, preko predelovalno-obdelovalnih postopkov, vse do končnih izdelkov. Neinvazivne tehnike in metode, zasnovane na osnovi merjenja vibro-mehanskega odziva materiala, predstavljajo objektivno osnovo, ter hitro in učinkovito spremljanje lastnosti materiala, kot tudi monitoringa končnih lesnih in ligno-celuloznih kompozitnih produktov.</p> <p>Namen predmeta je študentom doktorskega študija predstaviti akustične tehnike in metode, v slušnem, ultrazvočnem ter infrazvočnem področju, ki so na voljo na Oddelku za lesarstvo. Študent bo pridobil pregled ultrazvočnih tehnik, vibro-resonančnih tehnik in tehnik frekvenčnega odziva. Podrobneje se bo seznanil z akustično tomografijo in aplikacijami v gozdarstvu, za oceno kakovosti stoječih dreves in gozdno-lesnih sortimentov, v arboristiki, za evidentiranje notranjih strukturnih anomalij dreves, ter v gradnji z lesom, pri proučevanju nosilnih konstrukcijskih prerezov. Predstavljene bodo metode modalne analize pri vibro-resonančnih tehnikah za proučevanje elastomehanskih lastnosti lesa in lesnih kompozitov, za potrebe zasnove in izdelave lesenih glasbenih instrumentov ter gradnjo z lesom. Predstavljane bodo ultrazvočne analize tehnike za potrebe določanja elasto-mehanske anizotropije ter strukturnih anomalij masivnega lesa in lesnih kompozitov. Predstavljene bodo tudi tehnike spremljanja in analize akustične emisije, ki so skupaj z ultrazvočnimi tehnikami še posebej aktualne za monitoring in nadzor konstrukcijskih sklopov pri gradnji z lesom.</p> <p>Akustične merilne tehnike bodo predstavljene s strani izvajalcev predmeta, ki te metode redno uporabljajo pri svojem raziskovalnem delu. Študent bo v dogovoru z nosilcem predmeta in delovnim/predvidenim mentorjem lahko izbral nekaj relevantnih tehnik in metod, jih teoretično in praktično osvojil ter uporabil na izbranem problemu, ki bo povezan s temo predvidene doktorske disertacije.</p>	<p>measurement of relevant material properties. The need for monitoring wood properties ranges from standing trees in forest stands and trees in urban areas to processing, processing methods, and end products. Non-invasive techniques and methods based on the measurement of the vibromechanical response of the material provide an objective basis and enable rapid and effective monitoring of material properties and end products from wood and lignocellulosic composites.</p> <p>The objective of this course is to familiarize students with the acoustic techniques and methods in sound, ultrasound, and infrasound available in the Department of Wood Science and Technology. Students will receive an overview of ultrasonic techniques, vibro-resonance techniques, and frequency response techniques. They will learn about acoustic tomography and its applications in forestry for quality assessment of standing trees and forest assortments, in arboriculture for detection of internal structural anomalies of trees, and in timber construction for investigation of load-bearing structural cross sections. Methods of modal analysis using vibro-resonance techniques will be explored for the study of elastomechanical properties of wood and wood-based composites, for the needs of wooden musical instrument manufacturing and building with wood. Ultrasonic analysis techniques for determining elastomechanical anisotropy and structural anomalies of solid wood and wood-based composites will be presented. Techniques for monitoring and analysing acoustic emissions will be also presented, which in conjunction with ultrasonic techniques are particularly important for monitoring and testing assemblies in timber constructions.</p> <p>Acoustic measurement techniques will be presented by professional experts who regularly use these methods in their research work. The student will be able to select some relevant techniques and methods, master them theoretically and practically, and will be qualified to apply them to the chosen problem related to the topic of the proposed doctoral dissertation.</p>

Študentom bo na razpolago gradivo s predavanj in vaj v elektronski obliki. Gradivo bo objavljeno pred začetkom predavanj na spletni strani. Za izdelavo seminarskih nalog in nadgradnjo razumevanja vsebin bodo študentje uporabili tudi svetovni splet

Cilji in kompetence:

Objectives and competences:

<p>Cilj predmeta je seznaniti slušatelje z akustičnimi merilnimi metodami za analizo lesa, lesnih kompozitov in vrednotenje ter monitoring izbranih končnih produktov. Študentom bomo predstavili tako teoretične osnove, kot tudi aplikacije akustičnih merilnih metod v celotni gozdno-lesni verigi. V okviru predmeta se bodo študentje seznanili tako s prednostmi, kot tudi omejitvami posameznih metod.</p> <p><i>Kompetence:</i> Posamezne metode bodo preizkušene na realnem primeru. Te metode bodo študentje sposobni samostojno uporabiti pri nadaljnjem raziskovalnem delu.</p>	<p>The aim of the course is to familiarize students with acoustic measurement techniques for the analysis of wood, lignocellulosic composites, and for the evaluation and monitoring of selected wood-based products. Students will be taught about both, the theoretical principles and the applications of acoustic measurement techniques throughout the entire forest-wood industry value chain. During the course the students will learn both the advantages and limitations of each method.</p> <p><i>Competencies:</i> The individual methods will be tested on a real example. Students will be enabled to apply these methods independently in further research work.</p>
---	---

Predvideni študijski rezultati:

<p><i>Znanje in razumevanje:</i> Spoznati najpomembnejše akustične merilne metode in tehnike, ki so na voljo za analizo lesa in lignoceluloznih kompozitov, ter uporabne v celotni gozdno-lesni verigi, od stoječih dreves v gozdnih sestojih, tekom predelave in obdelave lesa in lignoceluloznih kompozitov, vse do določanja kakovosti in monitoringa končnih izdelkov.</p> <p><i>Refleksija:</i> Kritično ovrednotiti primernost posamezne akustične merilne metode in tehnike za preverjanje raziskovalnih hipotez in doseganje raziskovalnih ciljev.</p> <p><i>Uporaba:</i> Uporabiti izbrane akustične merilne tehnike in metode na lastnem raziskovalnem problemu in jih preizkusiti na praktičnem primeru v gozdnem sestoju, gozdno-lesnem sortimentu, materialu ali pol-izdelku v predelavi in obdelavi, ali na končnem produktu. Naučiti se izbirati ustrezne metode pri preverjanju raziskovalnih hipotez.</p>	<p>Intended learning outcomes:</p> <p><i>Knowledge and Understanding:</i> Learn about the main acoustic measurement methods and techniques available for wood and lignocellulosic composites analysis and their application throughout the entire forest-wood industry value chain, from standing trees in the forest stand to processing of wood and lignocellulosic composites, and finally quality monitoring of end products.</p> <p><i>Reflection:</i> Critically evaluate the suitability of individual acoustic measurement methods and techniques for testing research hypotheses and achieving research objectives.</p> <p><i>Application:</i> Apply selected acoustic measurement procedures and methods to students' own research question and test them on a practical example in a forest stand, a forest-wood value chain, a material or semi-finished product in processing or on the final product, respectively. The students will learn how to select appropriate methods when testing research hypotheses.</p>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij	General prerequisites for enrolment in doctoral studies.

Vsebina:	Content (Syllabus outline):
Signali, ki jih posnamemo na živih organizmih nosijo informacijo o procesih na molekularski ali celični ravni, ravni organov ali sistemski ravni. Različni biološki signali so na primer posnetki govora, elektrokardiogram (EKG), elektroencefalogram (EEG), elektoretinogram (ERG), elektrofiziološki posnetki na posameznih celicah, itd. Pogosto snemamo kombinacijo signalov, npr. signal	Signal transduced from living organisms are reporting processes at the molecular, cell, organ, or systemic level of organisation. Biological signals range from recordings of speech, the electrocardiogram (ECG), the electroencephalogram (EEG), electroretinogram (ERG), electrophysiological recordings on single cells, etc. In many cases we record a combination of signals, e.g. fluorescence signal as a reporter of

<p>fluorescence kot kazalca vsebnost kalcija v celicah, sočasno s signalom toka na plazmalemi. Podobno beležimo signale na poligrafu (detektor laži) ali polisomnografu za študije spanja. Biološki signali so sestavljeni iz signala in šuma. Pri predmetu bomo obravnavali osnove obdelave signalov v programskem jeziku Octave ali Matlab. Pri predmetu bomo uporabili realne signale za praktično uporabo analize časovnih sprememb bioloških spremenljivk. Uporabili bomo filtriranje, prileganje funkcij, povprečenje. Uporabili bomo primer študija profila fluorescenčne intenzitete. Šum pogosto povzroči močno variabilne profile. Filtriranje teh signalov zmanjšuje prostorsko ločljivost. Da bi se temu izognili, bomo uporabili povprečenje vrednosti sosednjih točk. V tem praktičnem primeru bomo uporabili diskretno Fourierjevo transformacijo (DFT) računano z algoritmom (FFT).</p>	<p>calcium level in the cell, together with the signal of the plasma membrane current. Similarly, we record signals of a polygraph (lie detector) or polysomnograph for sleep studies. Biological signals are an additive combination of signal and noise. A brief introduction to signal processing in Octave or Matlab will be given. Practical application of the signal processing will be studied. We will use analysis approaches of time dependent changes of biological measurements. We will use filtering, fitting of functions, averaging. An example of study of a line profile of fluorescent intensities will be presented. The image noise often results in scattered line profiles. Filtering of the signal results in reduced spatial resolution of the processed data. To avoid reducing the spatial resolution we will apply averaging of neighbouring pixel values. In this practical example the discrete Fourier transform (DFT) will be computed with a fast Fourier transform (FFT) algorithm.</p>
---	--

Temeljna literatura in viri/Readings:

R.B. Northrop: Signals and Systems Analysis In Biomedical Engineering, 2. ed., CRC press (2009)
Izbrani članki iz revije Biomedical Signal Processing and Control, Elsevier

Cilji in kompetence:

Pridobivanje osnovnih znanj za zajem podatkov, analogno-digitalno pretvorbo, obdelavo, analizo in interpretacijo rezultatov.

- zajem podatkov,
- vrednotenje in analiza šuma
- povprečenje, filtriranje, korelacija,
- meritve pojavov sprememb v signalu
- realni in kompleksni del analize Fourier, FFT, Bodejev diagram

Objectives and competences:

Acquiring of basic skills on data acquisition, analogue to digital conversion, processing, analysis and interpretation of results.

- Data acquisition,
- Noise evaluation and analysis
- Signal averaging, filtering, correlation,
- Measurements of features in the signal
- Real and Complex Fourier Series, Fast Fourier transform, Bode plot

Predvideni študijski rezultati:

Znanje in razumevanje:

- Praktična znanja za obdelavo signalov s pomočjo računalniških orodij.
- razumevanje temeljev bioloških signalov
- izbira ustrezne metodologije za obdelavo in analizo signalov.

Intended learning outcomes:

Knowledge and understanding:

- practical knowledge to solve signal processing tasks using computer tools.
- understanding basics of biological signals
- choosing of appropriate methodology to process and analyse signals.

Metode poučevanja in učenja:

Predavanja, konzultacije, praktične demonstracije, seminarji in individualno projektno delo.

Learning and teaching methods:

Lectures, consultations, practical demonstrations, seminars, individual project.

Načini ocenjevanja:

Predstavitve individualnega projekta in odgovori na vprašanja

Delež/Weight

100,00 %

Assessment:

Project presentation and answers to question

Ocenjevalna lestvica:

Grading system:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

5 - 10, a student passes the exam if he is graded from 6 to 10

Vaje/Tutorial: Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Splošni pogoji za vpis na doktorski študij, poznavanje osnov genetike.

Prerequisites:

General conditions for enrolment in doctoral studies, basic knowledge of genetics.

Vsebina:

Študentje se bodo spoznali s pojmom starodavne DNA, izolirane iz biološkega materiala organizmov, ki so živeli v preteklosti. Spoznali bodo zgodovino starodavne DNA in prvih raziskav na tem področju. V predmet bodo vključene teme o tem, kaj je starodavna DNA in kakšne so njene lastnosti (posebnosti zaradi njene degradacije). »Muzejska DNA« je pogovoren izraz za DNA izolirano iz organizmov hranjenih v muzejskih zbirkah, delno se

Content (Syllabus outline):

Students will be introduced to the concept of ancient DNA isolated from the biological material of organisms that lived in the past. They will learn about the history of ancient DNA and the first research in this field. The course will include topics about what ancient DNA is and what its properties are (specifics due to its degradation). "Museum DNA" is a colloquial term for DNA isolated from organisms stored in museum collections. The term partially

<p>pojem prekriva s pojmom starodavne DNA, predmet pa bo obravnaval njune podobnosti in razlike. Predstavljeno bo delo v muzejskih zbirkah – nekoč in danes – in zakaj so muzejske zbirke izjemnega pomena pri raziskovanju pretekle biodiverzitete ter njenemu ohranjanju.</p> <p>Predmet bo obsegal razlike v analizi starodavne (muzejske) DNA in analize standardne DNA, vse od prvih korakov izolacije do bioinformatične analize. Študentom bo predstavljena široka paleta znanstvenih področij, pri katerih se starodavna DNA uporablja (od antropologije, klimatskih sprememb pa do populacijske genetike).</p> <p>Sledili bodo izjemni primeri novih spoznanj, ki jih je omogočila analiza starodavne DNA:</p> <ol style="list-style-type: none"> 1. V evoluciji človeka: analiza starodavne DNA Neandertalcev in Denisovancev, kaj smo podedovali od enih oziroma drugih, skrivnostna četrta vrsta, katere DNA je viden v genomu ostalih treh? 2. Izumrtja določenih živalskih vrst (mamuti, tasmanski tigri, dodo), kaj vse nam povedo njihovi genomi? 3. Klimatske spremembe in odgovori, ki nam jih ponuja starodavna DNA. <p>Jurassic Park: kako daleč smo od obuditve dinosavrov, mamutov, neandertalcev – tehnične omejitve in etično-moralni vidiki.</p>	<p>overlaps with the expression ancient DNA, and we will address their similarities and differences. The work in museum collections, in the past and today will be presented together with the importance of museum collections in preserving biodiversity. The course will cover the differences in the analysis of ancient (museum) DNA and the analysis of standard DNA, from the first steps of isolation to bioinformatics analysis. Students will be introduced to a wide range of scientific fields in which ancient DNA is used (from anthropology and climate change to population genetics).</p> <p>Finally, some outstanding examples of the analysis of ancient DNA, which enabled new insights in their respective fields, will be presented/ discussed:</p> <ol style="list-style-type: none"> (1) Human evolution: Analysis of the ancient DNA of Neanderthals and Denisovans, what did we inherit from one or the other, the mysterious fourth species whose DNA is visible in the genome of the other three. (2) Extinctions of certain animal species (mammoths, Tasmanian tigers, dodos), what do their genomes tell us? (3) Climate change and the answers offered to us by ancient DNA. (4) Jurassic Park: how far are we from the revival of dinosaurs, mammoths, Neanderthals - technical limitations and ethical-moral aspects.
--	---

Temeljna literatura in viri/Readings:

Splošno o starodavni DNA (General about ancient DNA):

Revijalni članki s področja, tekoča periodika ter druga učna gradiva

Cilji in kompetence:

Cilji predmeta je seznaniti študente z lastnostmi starodavne DNA in številnimi znanstvenimi področji, kjer se uporablja. V tem kontekstu bo poudarek na študijah in konkretnih primerih, kjer je uporaba ključno doprinesla k razjasnitvi nekaterih vprašanj. Predstavljena bo tudi t.i. muzejska DNA in delo v muzejskih zbirkah, ki ga študentje običajno ne spoznajo tekom študija.

Kompetence študentov po opravljenem predmetu vključujejo znanje o starodavni in muzejski DNA ter njihova sposobnost vključiti to področje raziskav v njihove trenutne raziskave ali za uporabo v prihodnosti.

Objectives and competences:

The objectives of the course are to present the properties of ancient DNA and the many scientific fields where it is used. In this context, the focus will be on studies and concrete cases where the application has made a key contribution to clarifying research questions. The so-called museum DNA and work in museum collections will also be introduced as this subject is currently not represented in the curriculum.

Students' competences after completing the course include knowledge of ancient and museum DNA and their ability to incorporate the newly acquired knowledge into their current research or for future use.

Predvideni študijski rezultati:

Študentje bodo osvojili teoretično in praktično znanje o:

- lastnostih starodavne in muzejske DNA,
- delu v muzejskih zbirkah,

Intended learning outcomes:

Students will gain theoretical and practical knowledge of:

- properties of ancient and museum DNA,
- work in museum collections,

<p>- znanstvenih področjih, kjer se starodavna in muzejska DNA uporabljata (in sta doprinesli ključna spoznanja za njihov razvoj),</p> <p>- razlike v analizi v primerjavi s »standardno« DNA – od laboratorija do bioinformatike,</p> <p>- praktično delo, ki bo pripravilo študenta na dejansko uporabo starodavne DNA na izbranem področju.</p>	<p>- the scientific fields where ancient and museum DNA are used (and have contributed key insights to their development),</p> <p>- differences in analysis compared to "standard" DNA - from laboratory to bioinformatics,</p> <p>- practical work that will prepare the student for the actual use of ancient DNA in the chosen field.</p>
--	--

<p>Metode poučevanja in učenja:</p> <p>Metode poučevanja bodo odvisne od števila prijavljenih študentov. Predvidena so predavanja, kjer bodo predstavljene teoretične osnove in zgoraj navedeni konkretni primeri. V primeru manjšega števila študentov, bodo te osnove in primere spoznali preko navedene literature, ki jim bodo sledile konzultacije. Glede na področje raziskovanja oziroma interes bodo študentje pripravili seminarsko nalogo (ali predavanje, ali manuskript), ki se bo poglobila v eno izmed tem. Praktično delo bo prilagojeno zmoglostim/času študentov: omogočen bo obisk Prirodoslovnega muzeja na Dunaju in našega laboratorija, ki je specializiran za delo z muzejsko in starodavno DNA, ali pa bo praktično delo bioinformatične narave. Glede na področje raziskovanja doktorskega študenta se lahko analizo starodavne DNA tudi konkretno vključi v doktorsko raziskavo in objavi v obliki znanstvenega članka.</p>	<p>Learning and teaching methods:</p> <p>Teaching methods will depend on the number of students enrolled. In case of lectures (more than five students enrolled), the theoretical foundations and the above-mentioned concrete examples will be presented. In case of a small number of students, they will learn these basics and examples through studying the cited literature, followed by consultations. Depending on the field of research or interest, students will prepare a seminar (either in a form of a lecture or text), within one of the topics. The practical work will be adapted to the abilities / time of the students: it will be possible to visit the Natural History Museum in Vienna and our laboratory, which specializes in working with museum and ancient DNA, or the practical work will be of bioinformatics nature. Depending on the field of research of the doctoral student, the analysis of ancient DNA can also be concretely included in the doctoral research and published in the form of a scientific article.</p>

ANIMALNA BIOTEHNOLOGIJA

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Animalna biotehnologija
Course title:	Animal biotechnology
Članica nosilka/UL	UL BF
Member:	

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Bioznanosti, tretja stopnja, doktorski (v postopku)	Ni členitve (študijski program)		Celoletni	izbirni

Univerzitetna koda predmeta/University course code:	0037280
Koda učne enote na članici/UL Member course code:	3782

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
20	20	0	0	25	185	10

Nosilec predmeta/Lecturer:	Peter Dovč
-----------------------------------	------------

Izvajalci predavanj:	prof. dr. Peter Dovč, prof. dr. Gregor Gorjanc, prof. dr. Tanja Kunej, izr. prof. dr. Minja Zorc
Izvajalci seminarjev:	prof. dr. Peter Dovč
Izvajalci vaj:	
Izvajalci kliničnih vaj:	
Izvajalci drugih oblik:	
Izvajalci praktičnega usposabljanja:	

Vrsta predmeta/Course type:	teoretični/theoretical
------------------------------------	------------------------

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
splošni pogoji za vpis na doktorski študij	general requirement for the enrolment to the doctoral programme

Vsebina:	Content (Syllabus outline):
Predmet obsega najpomembnejša področja animalne biotehnologije, njihov razvoj in aktualne raziskovalne probleme. Vsebina predmeta je razdeljena na pet poglavij: 1. Pregled razvoja animalne biotehnologije s poudarkom na razvoju metod transgeneze in molekularnih markerjev za upravljanje z živalskimi genskimi viri. 2. Imunske tehnologije v animalni	The subject addresses the most important areas of animal biotechnology, their development and present research problems. The content is organized in five chapters: 1. Review of development in animal biotechnology with special accent on technology of transgenesis. 2. Immune technologies in animal biotechnology. 3. Epigenetic mechanisms regulating

biotehnologiji. 3. Epigenetski mehanizmi, ki uravnavajo izražanje genov in razvoj živalskih modelov za biomedicinske študije. 4. Analiza genomskih podatkov 5. Upravljanje velikih podatkovnih zbirk in genomski selekcija	gene expression and development of animal models for biomedical research. 4. Analysis of genomic data. 5. Management of big datasets and genomic selection.
--	---

---	--

Cilji in kompetence:

Pridobiti pregled nad najpomembnejšimi področji raziskav v animalni biotehnologiji in seznanitev z osnovnimi metodološkimi pristopi. Študentje naj bi tako dobro poznali področje, da bi lahko kompetentno presojali različne raziskovalne pristope in bili sposobni prepoznati možnosti za tehnološki preboj.

Objectives and competences:

Gaining the overview in the most important areas of research in animal biotechnology and getting acquainted with the basic methodological approaches. Students should be able to judge critically different research approaches and to develop the ability to recognize possibilities for technological breakthrough.

Predvideni študijski rezultati:

Znanje in razumevanje:
Temelječ na znanju genetike, molekularne biologije, fiziologije in statistike naj bi se študent seznanil s stanjem v animalni biotehnologiji in se usposobil za sledenje razvoja tega znanstvenega področja.

Intended learning outcomes:

Knowledge and understanding:
Based on their knowledge in genetics, molecular biology, physiology and statistics should students get informed about the research challenges in animal biotechnology and develop skills to follow advancements in this field of research.

Metode poučevanja in učenja:

Predavanja (pet predavateljev, skupno 20 ur predavanj).
Priprava seminarskega dela pri enem od predavateljev, konzultacije za pripravo seminarja.
Samostojen študij

Learning and teaching methods:

Lectures (five lecturers, cumulative 20 hours of lectures)
Preparation of the seminar under the guidance of one of the lecturers, consultations during the preparation of the seminar.
Individual study

Načini ocenjevanja:

Delež/Weight

Assessment:

Pisni izpit	40,00 %	Exam
Seminar (pisni izdelek)	40,00 %	Seminar (written version)
Predstavitve v zagovor seminarja	20,00 %	Presentation and defence of the seminar

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10

Izvajalci kliničnih vaj:
Izvajalci drugih oblik:
Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: individualno raziskovalni/individual research

Jeziki/Languages:

Predavanja/Lectures:	Slovenščina
Vaje/Tutorial:	Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Splošni pogoji za vpis na doktorski študij	Prerequisites: General conditions for enrolment in doctoral studies
--	--

Vsebina:

Dodatek snovi z antioksidativno učinkovitostjo v živilski izdelek prispeva h kakovosti in varnosti hrane, saj podaljša obstojnost ter zviša biološko vrednost živila. Antioksidanti so strukturno raznolike spojine. V okviru izbirnega predmeta bomo opisali posamezne skupine antioksidantov, ki so v živilu naravno prisotni ali dodani. Opisali bomo različne reakcijske mehanizme (redukcijska sposobnost, učinkovitost lovljenja prostih radikalov, sposobnost

Content (Syllabus outline):

The substances with antioxidative effectiveness added to food product contribute to its quality and safety, since it prolongs shelf-life and raises the biological value of the food. Antioxidants are structurally different compounds. In the frame of the elective subject the groups of antioxidants (naturally present in food or added) will be described. Various reaction mechanisms (reducing capacity, effectiveness in scavenging free radicals, ability to chelate metals) of

<p>keliranja kovin) delovanja antioksidantov. Pokazali bomo, da je antioksidativna učinkovitost spojine posledica ustreznih fizikalno-kemijskih lastnosti in kemijske strukture. Seznanili se bomo z različnimi metodološkimi pristopi določitve antioksidativne učinkovitosti. Živila so po svoji sestavi heterogeni sistemi. Zato vsebina predmeta vključuje primerjavo in interpretacijo delovanja antioksidantov v različnih sistemih ter razlago, kako strukturne lastnosti in specifična porazdelitev omenjenih spojin odloča o njihovi antioksidativni učinkovitosti. Ozaveščenost potrošnikov glede škodljivih vplivov sintetičnih aditivov vzpodbuja uporabo naravnih dodatkov. Zato se bomo seznanili z novejšimi metodološkimi pristopi pridobivanja in karakterizacije izvlečkov spojin z antioksidativno učinkovitostjo iz različnih naravnih virov.</p>	<p>antioxidant's action will be described. It will be demonstrated that the antioxidative effectiveness of a compound is a consequence of corresponding physico-chemical properties and chemical structure. The students will be acquainted with various methodological approaches of antioxidative effectiveness determination. Foods are heterogeneous systems in their composition. Therefore the comparison and interpretation of the activity of antioxidants in various systems will be provided; we will show and explain how structural properties and partition of these compounds determine their antioxidative effectiveness. Consumer awareness of the harmful effects of synthetic additives promotes the use of natural additives. Therefore, the novel methodological approaches of obtaining and characterization of extracts of compounds with antioxidant efficiency from various natural resources will be provided.</p>

Cilji in kompetence:

Izobraževalni cilji: Cilj predmeta je posredovati znanja povezana s problematiko antioksidantov in osvojiti ustrezno metodologijo določitve antioksidativne učinkovitosti.

Kompetence: Sistematična obravnava in razumevanje različnih dejavnikov, ki so povezani z antioksidanti je potrebna zato, da bi lahko predvideli in nadzorovali kakovost in varnost živilskega izdelka.

Objectives and competences:

Educational aims: The aim of the subject is to provide the knowledge associated with antioxidants and to get familiar with appropriate methodology of antioxidative effectiveness determination.

Competences: Systematic treatment and understanding of the various factors connected with antioxidants is necessary for anticipating and controlling the quality and safety of food products.

Predvideni študijski rezultati:

Izobraževalni cilji: Cilj predmeta je pridobiti znanje o antioksidantih in se seznaniti z ustrezno metodologijo določanja antioksidativne učinkovitosti.

Kompetence: Sistematična obravnava in razumevanje različnih dejavnikov, povezanih z antioksidanti, ki sta potrebna za predvidevanje in nadzor kakovosti ter varnosti živilskih izdelkov.

Intended learning outcomes:

Knowledge and understanding the mechanisms of antioxidant action.

Capacity to predict the quality, effectiveness, usefulness and suitability of individual antioxidants in given food matrices.

Capacity to interpret research results.

Metode poučevanja in učenja:

Seminar, vaje, konzultacije.

Learning and teaching methods:

Seminar, tutorial, consultation.

Načini ocenjevanja:

Priprava seminarske naloge	70,00 %	Preparation of seminar
Predstavitev seminarske naloge	30,00 %	Presentation of seminar

Delež/Weight

Assessment:

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Splošni pogoji za vpis na doktorski študij	Prerequisites: General conditions for enrolment in doctoral studies.
--	---

Vsebina:

Predmet vsebuje štiri vsebinske sklope:
- Specialna in splošna etologija domačih in družnih živali: poznavanje splošne etološke terminologije; ugotavljanje pomena izražanja oblik obnašanja; razumevanje procesa od sprejemanja dražljajev do obdelave v centralnem živčnem sistemu in reakcije živali; izražanje čustev; načini učenja in nabiranja izkušenj; fiziološke osnove-obnašanja, igra kot kazalec dobrega počutja živali in drugo

Content (Syllabus outline):

Lectures contain four sections:
- The basic science of ethology of farm and companion animals: knowledge of general ethological terminology; searching explanations for behavioural expressions; understanding the process of adopting stimuli to processing in the central nervous system and the reactions of animals; expressing feelings; ways of learning and the accumulation of experience;

<p>- Živalska etika: teorije v etiki, ki se nanašajo na dolžnosti človeka do živali bodo predstavljene; razpravljanje o razmerju med znanostjo in etiko ter o gensko spremenjenih organizmih, ekološki rejji, dobrem počutju živali, mučenju živali itn.</p> <p>- Odnos človeka do živali: pregled in razprava o odnosu človeka do živali s poudarkom na zgodovinskem vidiku</p> <p>- Znanstveni pristopi k razumevanja počutja živali: seznanitev s pristopi k raziskovanju dobrega počutja živali; razprava o pomembnosti dojemanja živali kot čutnih individuumov</p>	<p>physiological bases of behavior; playing as an indicator of animal welfare and other</p> <p>- Animal Ethics: the theories of ethics, which relate to the duties of man towards animals will be presented, discussing the relationship between science and ethics of genetically modified organisms, organic farming, animal welfare, animal cruelty, etc..</p> <p>- Human-animal interaction: a review and discussion of the relation of man to animals with an emphasis on the historical aspect of</p> <p>- A scientific approach to animal welfare: familiarization with the approaches in animal welfare research; debate about the importance of animals as sentient individuals</p>

Vsebina:	Content (Syllabus outline):
Glede na svojo velikost je teritorij Slovenije izjemno raznolik v smislu biotske raznovrstnosti, tipov ekosistemov in geoloških formacij, kar skupaj predstavlja »naravno dediščino«. Poleg svoje inherentne vrednosti je naravna dediščina bistvenega pomena zaradi številnih družbenih in ekoloških dobrot, ki jih nudi družbi. Posledično se varstvu naravne dediščine posveča precejšnja pozornost, kar pa postaja vse težje izvedljivo zaradi rastočega vpliva	For its size, the territory of Slovenia is extraordinarily diverse in terms of biodiversity, ecosystem types, and geological formations, together referred to as "natural heritage". In addition to the innate value of natural heritage, it is essential for providing a variety of social and ecological services to society. Consequently, much emphasis is placed on conserving natural heritage, yet this is becoming increasingly difficult to achieve due to the growing influence of humanity,

<p>človeštva, predvsem v obliki podnebnih sprememb, degradacije habitatov in invazivnih vrst. Za uspešno ohranjanje je ključno razumeti, kako tako naravni (ekološki in geološki) kot tudi antropogeni procesi vplivajo na naravno dediščino in oblikovati strategije upravljanja, ki ohranjajo oziroma ponovno vzpostavljajo zelene komponente naravne dediščine v našem hitro spreminjajočem se okolju. V ta namen predmet pokriva naslednje poglavitne teme:</p> <ul style="list-style-type: none"> • Sistem varstva narave v Sloveniji in svetu: zavarovana območja ter drugi neposredni in posredni pravni ukrepi • Analize deležnikov pri varovanju naravne dediščine • Pomen vključevanja dedežnikov v ukrepe varstva narave • Interpretacija narave (možnosti, načini izbire najprimernejšega pristopa predstavitve narave ciljnim skupinam) in usmerjanje turizma • Ekologija motenj (t.j. kako procesi kot na primer sečnja, požiganje ali paša vplivajo na strukturo, sestavo in dinamiko vegetacije) • Metode kvantifikacije vzorcev in procesov v rastlinskih združbah • Metode v zgodovinski ekologiji • Znanost in praksa obnovitvene ekologije • Upoštevanje prostorske in časovne dimenzije (t.j. premik od posamičnih rastišč k pokrajinam in od let k desetletjem) • Povezava življenjskih značilnosti zaščitene vrste s habitatnimi značilnostmi in njihovo prostorsko in časovno dinamiko • Naravne in antropogene spremembe abiotičnih značilnosti (npr. prst, voda, geološke oblike, ceste, hidrološke strukture itd.) naravne dediščine • Upravljanje z invazivnimi vrstami • Dolgoročno upravljanje naravne dediščine v kontekstu podnebnih sprememb • Analiza interesa deležnikov za naravno dediščino • Metode komuniciranja pomena naravne dediščine v javnosti 	<p>namely, from climate change, habitat degradation, and invasive species. A key to successful conservation is to understand how both natural (ecological and geological) and anthropogenic processes influence natural heritage and to design management strategies that either maintain or restore the desired components of natural heritage in our rapidly changing environment. To this end, the main themes covered in the class include:</p> <ul style="list-style-type: none"> • Nature protection system in Slovenia and worldwide: protected areas and other direct and indirect legal measures • Stakeholder analysis in natural heritage conservation • The importance of stakeholder involvement in nature conservation measures • Interpreting nature (options, ways of choosing the most appropriate approach to presenting nature to target groups) and directing tourism • Disturbance ecology (i.e. how do processes like forest harvesting, burning, or grazing influence vegetation structure, composition, and dynamics) • Methods for quantifying patterns and processes in plant communities • Methods in historical ecology • The science and practice of restoration ecology • Consideration of spatial and temporal scale (i.e. moving from individual sites to landscapes, and from years to decades) • Linking life history traits of protected species of interest with habitat characteristics and their dynamics in space and time • Natural and anthropogenic modification of abiotic features (i.e. soil, water, landforms, roads, hydrological constructions, etc) of natural heritage • Managing invasive species • Long-term management of natural heritage in the context of climate change • Analysis of stakeholder interests in natural heritage • Methods of communicating the importance of natural heritage with the public

Izbrane monografije (znanstveni priročniki) in znanstveni članki iz znanstvenih publikacij, ki pokrivajo kandidatovo raziskovalno področje.

Selected monographs and scientific papers related to the students field of research.

Cilji in kompetence:

Cilj je zagotoviti poglobljeno znanje z znanstvenega in upravljaljskega vidika z naravno dediščino. Predmet se osredotoča na biotsko in abiotsko komponento naravne dediščine in poleg tega vsebuje tudi socialni vidik, saj so pri zavarovanju in upravljanju naravne dediščine vključeni številni deležniki oz. skupine. Predmet je tematsko naravnan tako, da se kar najbolje prilagodi tematiki študentove doktorske naloge. Predmet se osredotoča na metode za kvantifikacijo in implementacijo (vpeljavo) zaščite in obnove naravne dediščine v načrtih za upravljanje.

Objectives and competences:

The overall goal is to provide advanced knowledge on both scientific and management aspects of nature heritage. The class focuses on both biotic and abiotic components of natural heritage, and also includes a social science component due to the various stakeholder groups often involved with the protection and management of natural heritage. The class is individually tailored to the doctoral thesis of each student. All aspects of the class have a strong focus on methods to both quantify processes and implement conservation and restoration oriented management plans.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študentje bodo zmožni: 1) razumeti in kvantificirati kako naravni in antropogeni procesi vplivajo na dano območje/predmet naravne dediščine, 2) oblikovati učinkovit upravljaljski načrt, ki predvideva vzdrževanje ali obnovo zaščitene naravne vrednote in 3) oceniti interes različnih skupin deležnikov v povezavi z razglasitvijo, vzdrževanjem in obnovo naravne dediščine.

Intended learning outcomes:

Knowledge and understanding:

Students will be able to 1) understand and quantify how natural and anthropogenic processes influence a given area/object of natural heritage; 2) design an effective management plan that either maintains or restores the desired features under protection; and 3) assesses the interests of various stakeholder groups in the context of establishing, maintaining, or restoring natural heritage.

Metode poučevanja in učenja:

Vsebina bo v veliki meri prilagojena kandidatovem zanimanju in temi doktorske naloge. Metode poučevanja vključujejo:

- predavanja (izbrane tematike) in pripravo na seminar
- konzultacije, terensko delo in vključitev v raziskovalne projekte
- skupinska diskusija izbranih tem

Learning and teaching methods:

The content will be in large part tailored to the individual research interests of the candidate.

Teaching methods will include:

- lectures (selected topics) and preparation of a guided seminar
- consultation, field-work, and involvement in research projects
- group discussion of selected topics

Načini ocenjevanja:**Delež/Weight****Assessment:**

Predstavitve širšega znanstvenega področja študentove doktorske teme	50,00 %	Presentation of the wider scientific field of the student's doctoral topic
sodelovanje pri diskusijah	50,00 %	Class participation

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10

Cilji in kompetence:

<p>Predmet seznanja študente z osnovnimi pojmi, pristopi in tehnologijami na področju biodiagnostike ter z uporabo bioloških makromolekul v različnih laboratorijskih diagnostičnih metodah in sredstvih. Študent spozna lastnosti bioloških makromolekul, njihovo sposobnost vezave ligandov in dejavnike, ki določajo njihovo specifičnost. Podani so načini njihovega pridobivanja in priprava stabilnih oblik. Študent se seznani z vrstami bioznačevalcev in njihove aplikacije v diagnostiki. Seznani se z vrstami diagnostičnih testov in biosenzorjev ter njihove uporabe. Seznani študente z nano- in mikrotehnologijami (mikrosfere, mikromreže, mikrofluidika) v razvoju novih diagnostičnih orodij. Predstavljeno je razvoj novih diagnostičnih sredstev, njihovo delovanje, metodika priprave testov v laboratorijskem in industrijskem merilu in načini kontrole in zagotavljanja njihove kakovosti.</p>	<p>Objectives and competences:</p> <p>The course introduces students to the fundamental concepts, approaches, and technologies in the field of biodiagnostics, with a focus on the application of biological macromolecules in laboratory diagnostic methods and devices. They will be informed on properties of biological macromolecules, their ability to bind ligands and on factors defining their specificity. The methods for their isolation and the preparation of stable forms will be presented. Students will be introduced to different types of biomarkers and their applications in diagnostics, as well as to various diagnostic tests and biosensors and their practical uses. In addition, the course presents nano- and microtechnologies (such as microspheres, microarrays, and microfluidics) and their role in the development of novel diagnostic tools. The development process of new diagnostic products will be introduced, including their functioning as well as technologies for laboratory and large scale production and methods for quality control and assurance will be presented.</p>

---	--

Temeljna literatura in viri/Readings:

aktualni znanstveni in pregledni članki, ki so javno dostopni preko spleta

Cilji in kompetence:

Cilj predmeta je, da študent uporablja različne eksperimentalne pristope za gojenje in karakterizacijo rasti biofilmov. Uporablja različne mehanske in fizikalno-kemijske pristope za kontrolo rasti mikroorganizmov v biofilmih, spozna in razume vpliv biotskih/abiotskih dejavnikov okolja na razvoj biofilmov. Nauči se uporabe naprednih tehnik za določanje sestave, strukture in dinamike biofilmov.

Objectives and competences:

Upon successful completion of the individual research training the student will learn how to use different techniques for the growth and characterization of biofilms. Will be familiar with various biotic and abiotic factors that influence biofilm development. The student will understand how to use different mechanical and physico-chemical treatments to control microbial growth in biofilms. Uses the advanced techniques for the evaluation of a biofilm composition, structure and dynamics.

Predvideni študijski rezultati:

Študent skozi individualno raziskovalno delo v laboratoriju spozna glavne biološke in kemijske komponente biofilmov. Razume njihovo strukturno in dinamično obnašanje. Razume dinamiko nastanka in propada biofilma. Pozna spremembe v celični fiziologiji, ki omogočajo nastanek biofilma. Razume transportne pojave v biofilmu, vpliv signaliziranja in pozna glavne tehnike za proučevanje biofilmov. Pozna škodljive in koristne vplive biofilmov ter načine za preprečitev oziroma uporabo biofilmov.

Intended learning outcomes:

Through individual research work in the laboratory student learns about the main biological and chemical components of biofilms. Understands structure – dynamic relationship in biofilms. Understands steps in biofilm formation, dispersal and disintegration. Understands physiological changes that allow biofilm formation. Understands transport phenomena in biofilms and role of signalling, knows the main techniques used for studies of biofilms. Student knows how to prevent or use biofilms.

Metode poučevanja in učenja:

Študent v dogovoru z nosilcem in izvajalci določi raziskovalni projekt in opravi praktično delo v laboratoriju, ki je vezano na rast in karakterizacijo biofilmov. V okviru predmeta je možna uporaba raziskovalnih orodij, ki smo jih razvili v laboratorijih, za potrebe raziskovalnega dela doktorskega študenta. V seminarskem delu študent pripravi poročilo o svojem raziskovalnem projektu.

Learning and teaching methods:

In agreement with lecturers student determines the aims of the individual research project and performs the experiments related to growth and characterization of biofilms in the laboratory. Student may use research tools developed in our laboratories for his/her PhD project related to microbial biofilms. In a seminar student produces a report about his/her individual research project.

Načini ocenjevanja:

Ocenjuje se izvedba problemsko orientiranega individualnega raziskovalnega dela in pripravljenega seminarja.

Delež/Weight

100,00 %

Assessment:

Assesment of problem oriented individual research work and written report.

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
splošni pogoji za vpis na doktorski študij	General conditions for enrolment in doctoral studies

Vsebina: <i>Termodinamski opis sistemov z velikim številom delcev:</i> fazna vsota, entropija, prosta energija, kemijski potencial, elektrokemijski potencial, osmotski tlak. <i>Sestava bioloških membran:</i> lipidne molekule, proteini, glikoproteini, membranski skelet, oblika lipidov in proteinov, električne lastnosti lipidov in proteinov <i>Samoorganizacija lipidov in proteinov:</i> linearni agregati membranskih sestavin, agregacija lipidnih molekul v micelle in lipidne dvojne plasti, biološko pomembne	Content (Syllabus outline): <i>Thermodynamic description of systems with a large number of particles:</i> phase sums, entropy, free energy, chemical potential, electrochemical potential, osmotic pressure. <i>Composition of biological membranes:</i> lipid molecules, proteins, glycoproteins, membrane skeletons, forms of lipids and proteins, electrical properties of lipids and proteins. <i>Self-organisation of lipids and proteins:</i> linear aggregates of membranous components, aggregation of lipid
--	--

<p>nelamelarne lipidne faze, tvorba fleksibilnih membranskih nanodomen, lateralna fazna separacija membranskih sestavin, agregacija nanodomen, tvorba in stabilnost membranskih nanotub.</p> <p><i>Elastične lastnosti membran:</i> deformacije v ravnini membrane, upogibna energija, vpliv oblike membranskih sestavin in direktnih interakcij med membranskimi sestavinami na elastične lastnosti membran, lateralna porazdelitev membranskih sestavin in elastične lastnosti membrane, elastičnih lastnosti membrane ter oblika celic in organel, vpliv citoskeleta na obliko celice.</p> <p><i>Električne lastnosti membran:</i> električna dvojna plast, Poisson-Boltzmannova teorija električne dvojne plasti, Gouy-Chapmanov model električne dvojne plasti, prosta energija električne dvojne plasti, vpliv končne velikosti molekul in porazdelitve naboja znotraj posamezne molekule na lastnosti električne dvojne plasti, vpliv velikosti in porazdelitve električnega naboja membrane na transport naelektrenih molekul preko membrane, vezava in adhezija naelektrenih molekul na površino membrane.</p> <p><i>Elektrostatske Interakcije med membranskimi površinami:</i> vpliv sestave raztopine na interakcije med membranami, vpliv električnih lastnosti molekul v raztopini na interakcije med membranami, adhezija membran.</p> <p><i>Transport in komunikacije med celicami in organelami:</i> mehanizmi mikro- in nano-vesikulacije, vpliv električnih lastnosti membran in raztopine na vesikulacijo membran, endocitoza, eksocitoza, fuzija vesiklov, enkapsulacija nanodelcev in DNA, vpliv detergentov in nanodelcev na vesikulacijo in obliko membrane, mehanizmi stabilnosti in tvorbe membranskih nanotub ter njihova vloga pri transportu snovi med celicami in med celičnimi organelami. Mikrovesikulacija membran in njena vloga pri razširjanju tumorjev in nastajanju krvnih strdkov. Mehanizmi nastajanje in stabilnost membranskih por.</p>	<p>molecules in mycelia and lipid double layers, biologically important non-lammelular lipid phases, formation of flexible membranous nano-domains, lateral phase separation of membranous components, aggregation of nanodomains, formation and stability of membranous nanotubes.</p> <p><i>Elastic properties of membranes:</i> deformations in levels of a membrane, flexible energy, influence of forms of membrane components and direct interactions between membranous components in elastic properties of membranes, lateral distribution of membranous components and elastic properties of membranes, elastic properties of membranes and forms of cells and organelles, influence of cytoskeleton on forms of cells.</p> <p><i>Electric properties of membranes:</i> electric double layer, Poisson-Boltzmann theory of electric double layer, Gouy-Chapman model of electric double layer, free energy of electric double layer, influence of final size of molecule and distribution of charge within individual molecules on the properties of an electrical double layer, influence of size and distribution of electrical charge of a membrane on transport of electrified molecules through a membrane, bonds and adhesion of electrified molecules on the surface of a membrane.</p> <p><i>Electrostatic interaction between membrane surfaces:</i> influence of components of solvents on the interaction between membranes, influence of electrical properties of molecules in solvents on the interaction between membranes, adhesion of membranes.</p> <p><i>Transport and communication between cells and organelles:</i> mechanisms of micro- and nano-vesiculation, influence of electrical properties of membranes and solvens on the vesiculation of membranes, endocytosis, exocytosis, fusion of vesicles, encapsulation of nano-particles and DNA, influence of detergents and nano-particles on vesiculation and forms of membrane, mechanisms of stability and formations of membrane nanotubes and their role in the transport of substances between cells and between cell organelles. Microvesiculation of membranes and its role in spreading tumours and creation of blood clots. Mechanisms of creation and stability of membrane pores.</p>

4. aktualni znanstveni članki iz področja, ki jih sproti določijo izvajalci predmeta.

<p>Cilji in kompetence:</p> <p>Študenti se seznanijo z biofizikalnim opisom bioloških membran s pomočjo uveljavljenih modelov elektrostatičnih in elastičnih lastnosti membran in membranskih mikro- ter nano-struktur. Prikazani bodo izbrani najnovejši rezultati s področja biofizike membranskih nanostruktur.</p> <p>Izobraževalni cilji: Temeljni izobraževalni cilj je poglobitev znanja za delo s celičnimi membranami, celicami in umetnimi lipidnimi sistemi ter pridobitev znanja na področju raziskav vpliva različnih snovi kot so maščobe, detergenti in nanodelci na stabilnost membrane, membransko vesikulacijo, medcelične komunikacije ter patološka stanja membrane in celice.</p>	<p>Objectives and competences:</p> <p>Students are familiarised with biophysical description of biological membranes with the aid of established models of electrostatic and elastic properties of membranes and membranous micro- and macro-nanostructures. Selected most recent results in the field of biophysics of membranous nanostructures will be presented.</p> <p>Educational aims: The basic educational aim is to deepen knowledge for work with cell membranes, cells and artificial lipid systems and to obtain knowledge in the field of research into the influence of various substances, such as fats, detergents and nanoparticles, on the stability of membranes, membrane vesicles, inter-cellular communication and pathological states of membranes and cells.</p>
---	--

<p>Predvideni študijski rezultati:</p> <p>Kandidata usposobiti za izvedbo omenjenih raziskav, katerih rezultati bodo predstavljali pomembne prispevke temeljni ali aplikativni znanosti na področju študija membranskih lastnosti in membranske vesikulacije ter komunikacije med celicami v povezavi z študijem različnih bolezenskih stanj na nivoju membrane in celice, na primer razširjanje tumorjev ter nastajanje krvnih strdkov.</p>	<p>Intended learning outcomes:</p> <p>To qualify the candidate for carrying out the mentioned research, the results of which will make an important contribution to basic and applicative science in the field of studies of membrane properties and membrane vesiculation and communication between cells, in connection with the study of various disease states on the level of membranes and cells, such as the spread of tumours and the creation of blood clots.</p>
---	---

<p>Metode poučevanja in učenja:</p> <p>Predavanja, seminarji, konzultacije, projektno/seminarsko delo.</p>	<p>Learning and teaching methods:</p> <p>Lectures, seminars, consultations, project/seminar work.</p>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij.	General conditions for enrolment in doctoral studies.

Vsebina:	Content (Syllabus outline):
- Bioinformacijske podatkovne zbirke: zaporedja nukleinskih kislin, proteinov, strukturne podatkovne zbirke, bibliografske podatkovne zbirke. Orodja za analizo zaporedij in struktur. - Genomski projekti modelnih organizmov, primerjalna genomika, določevanje genov in regulatornih regij v genomih, SNP analize, genske mreže.	- Databases in bioinformatics, nucleic acid sequences, protein sequences, 3D structures, bibliographic information. Tools for analysis of sequences and structures. - Genomic projects of model organisms, comparative genomics, identifying genes and regulatory regions of genomes, SNP analysis, gene networks.

<ul style="list-style-type: none"> - Orodja v transkriptomiki in visoko-zmogljivostni genetiki. - Bioinformatična orodja v proteomiki in interaktomiki. - Integrativna genomika. - Aplikacije: bioinformatika v okoljski genomiki, farmakogenomiki. - Ontologije in zbirke znanj v bioinformatiki. - Bioinformatičski pristopi v kemogenomiki. - Projektno delo s specifičnimi programskimi orodji med predavanji in v okviru seminarske naloge. 	<ul style="list-style-type: none"> - Bioinformatics tools in transcriptomics and high-throughput genetics. - Integrative genomics. - Bio-informatics tools in proteomics and interactomics. - Applications: Bioinformatics in environmental genomics, pharmacogenomics. - Ontologies and knowledge databases in bioinformatics. - Bioinformatics approaches in chemogenomics. - Project work with specific software tools during the lectures and within seminar.
---	--

Temeljna literatura in viri/Readings:

<ul style="list-style-type: none"> - Jonathan Pevsner (2015) Bioinformatics and Functional Genomics, 3rd Edition, ISBN 9781118581780 - David W. Mount (2004) Bioinformatics. Sequence and Genome Analysis. Cold Spring Harbor Laboratory Press, USA, 2nd edition, ISBN 0879697121. - pregledni in originalni znanstveni članki s širšega področja bioinformatike.
--

Cilji in kompetence:

Seznanitev s celotnim področjem bioinformatike in trenutnimi trendi v razvoju bioinformatike. Predmet daje študentu pregled nad celotnim področjem bioinformatike in ga uvaja v raziskovalno delo na glavnih toriščih raziskav v bioinformatiki.

Objectives and competences:

Students will become familiar with the entire area of bioinformatics and current trends in the development of bioinformatics. The subject gives students an overview of the field and introduces the research work on the main spheres of research in bioinformatics.

Predvideni študijski rezultati:

Znanje in razumevanje:
Študenti bodo spoznali specifična bioinformatična orodja, njihove omejitve in potrebe po njihovem izboljšanju glede na razvoj raziskav v genetiki, genomiki, proteomiki, sistemski in strukturni biologiji ter v evlucijskih študijah. Študenti se bodo tudi seznanili z naravo podatkov v bioloških raziskavah in z najpomembnejšimi biološkimi podatkovnimi zbirkami ter njihovo uporabo.

Intended learning outcomes:

Knowledge and understanding:
Students will learn specific bioinformatics tools, their limitations and their need for improvement in relation to the development of research in genetics, genomics, proteomics, systems and structural biology and in evolutionary studies. Students will also learn about the nature of the data in biological research and the most important biological databases and their use.

Metode poučevanja in učenja:

Predavanja, projektno delo, praktične vaje z računalniki.

Learning and teaching methods:

Lectures, project workshops, practical work with computers.

Načini ocenjevanja:

Pisno preverjanje znanja

Delež/Weight

100,00 %

Assessment:

Written exam

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10

Reference nosilca/Lecturer's references:

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij.	General prerequisites for enrolment in doctoral studies.

Vsebina:	Content (Syllabus outline):
Populacijska genomika je interdisciplinarno področje, ki združuje genetiko, evolucijsko biologijo in bioinformatiko za preučevanje genetske raznolikosti znotraj in med populacijami. S pomočjo naprednih genomskih tehnologij omogoča poglobljeno razumevanje genetskih mehanizmov, ki oblikujejo populacije in vplivajo na njihove evolucijske dinamike.	Population genomics is an interdisciplinary field that combines genetics, evolutionary biology, and bioinformatics to study genetic diversity within and between populations. Utilizing advanced genomic technologies, it enables a deeper understanding of the genetic mechanisms shaping populations and influencing their evolutionary dynamics. Population genomics is essential for understanding processes such as selection, migration, mutation, and

<p>Populacijska genomika je ključna za razumevanje procesov, kot so selekcija, migracije, mutacije in genetski zdrsi, in prilagoditvenih sposobnosti organizmov. Poleg tega ima širok spekter aplikacij, ki segajo od biomedicine in ohranjanja biodiverzitete do kmetijstva in biotehnologije. Osredotoča se na analizo obsežnih genomskih podatkov, kar omogoča natančno zaznavanje selekcijskih signalov, analizo genetske strukture populacij in identifikacijo genetskih označevalcev, ki so povezani s specifičnimi fenotipskimi lastnostmi.</p> <p>Pri predmetu se študent seznanja z različnimi tipi genetskih označevalcev, ki se uporabljajo v genomskih študijah, s poudarkom na njihovi informacijski vrednosti in strategijah za njihovo interpretacijo. Študent bo imel priložnost preizkusiti različne strategije za analizo in interpretacijo genomskih podatkov in pridobil praktične izkušnje z bioinformacijskimi orodji. Ob tem se bo usposobil za kritično presojo metod in rezultatov ter oblikovanje učinkovitih strategij za interpretacijo genomskih podatkov, kar mu bo omogočilo samostojno raziskovalno delo.</p>	<p>genetic drift, as well as the adaptive capabilities of organisms. Furthermore, it has a wide range of applications spanning biomedicine, biodiversity conservation, agriculture, and biotechnology. The field focuses on analyzing large-scale genomic datasets, enabling the precise detection of selection signals, the study of population genetic structure, and the identification of genetic markers associated with specific phenotypic traits.</p> <p>The course introduces students to various types of genetic markers used in genomic studies, emphasizing their informational value and strategies for their interpretation. Students will have the opportunity to test different strategies for analyzing and interpreting genomic data and gain practical experience with bioinformatics tools. They will also develop the ability to critically evaluate methods and results and design effective strategies for interpreting genomic data, equipping them for independent research work.</p>

Cilji in kompetence:

<p><i>Cilj:</i> Cilj predmeta je študente seznaniti z različnimi strategijami za interpretacijo genomskih populacijskih podatkov ter jih usposobiti za njihovo samostojno analizo. Poudarek bo na pridobivanju praktičnega znanja, potrebnega za obvladovanje kompleksnih podatkovnih nizov, in na razvijanju sposobnosti za kritično presojo izbranih metod in rezultatov.</p> <p><i>Kompetence:</i> Študent bo razumel osnovne koncepte populacijske genomike, kot so selekcija, mutacija, migracija in genetski zdrsi. Pridobil bo znanje o različnih tipih genetskih označevalcev in njihovi uporabi. Študent bo usposobljen za uporabo bioinformacijskih orodij (npr. PLINK, ADMIXTURE, VCFtools) za analizo genomskih podatkov in za izvedbo kontrole in pripravo podatkov za analizo. Z uporabo metod, kot so PCA in ADMIXTURE, bo analiziral genetsko strukturo populacij in primerjal informacijsko vrednost različnih tipov označevalcev in analitičnih metod. Študent bo oblikoval raziskovalne strategije za interpretacijo kompleksnih genomskih podatkov, ki bodo vključevale različne tipe podatkov in metodološke pristope. Rezultate analiz bo integriral v</p>	<p><i>Objectives and competences:</i></p> <p><i>Objectives:</i> The objective of the course is to familiarise students with different strategies for interpreting genomic population data and to equip them with the skills required for independent analysis. Emphasis is placed on acquiring the practical skills required to deal with complex data sets and developing the ability to critically evaluate selected methods and results.</p> <p><i>Competencies:</i> Student will understand the basic concepts of population genomics, such as selection, mutation, migration and genetic drift. They will gain knowledge of different types of genetic markers and their applications. They master the use of bioinformatics tools (e.g. PLINK, ADMIXTURE, VCFtools) to analyse genomic data, control their quality and prepare for the analysis. Using methods such as PCA and ADMIXTURE, they will analyze the genetic structure of populations and compare the informational value of different types of markers and methods. Students will design research strategies for interpreting complex genomic data using different data types and methodological approaches. They will integrate the results of the analyses in a broader</p>

širši biološki kontekst. Ocenil bo ustreznost različnih analitičnih pristopov glede na raziskovalne cilje in značilnosti podatkov.	biological context. Students will evaluate the suitability of different analytical approaches based on research objectives and data characteristics.
--	--

Predvideni študijski rezultati: <i>Znanje in razumevanje:</i> Študent bo seznanjen z aktualnimi tipi genomskih podatkov in strategijami za njihovo vrednotenje. Pridobljeno teoretično znanje mu bo omogočilo izbiro in prilagoditev ustreznih kombinacij metod za analizo biološkega materiala, ki bo na voljo.	Intended learning outcomes: <i>Knowledge and Understanding:</i> Students will be familiar with state-of-the-art types of genomic data and strategies for their analysis. The acquired theoretical knowledge will enable them to select and adapt an appropriate combination of methods to analyse the biological material available to them.
---	---

Metode poučevanja in učenja: <ul style="list-style-type: none"> • Predavanja (osnovna izhodišča in tehnična znanja) • Vaje (namenjene spoznavanju različnih setov podatkov in metodoloških pristopov) • Predstavitve in interpretacije rezultatov v seminarski obliki • Samostojno delo (namenjeno samostojni pripravi strategije za analizo izbranih setov podatkov) 	Learning and teaching methods: <ul style="list-style-type: none"> • Lectures (covering fundamental principles and technical knowledge) • Tutorials (focused on exploring various datasets and methodological approaches) • Presentations and interpretation of results in seminar format • Independent work (dedicated to independently developing a strategy for analyzing selected datasets)
--	---

Načini ocenjevanja:	Delež/Weight	Assessment:
Pisni izpit	40,00 %	Written exam
Praktični projekt	60,00 %	Practical project

Ocenjevalna lestvica: 5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	Grading system: 5 - 10, a student passes the exam if he is graded from 6 to 10

Osnovna znanja programiranja, verjetnosti in statistike.	Basics of computer programming in any language, basic knowledge of probability and statistics.

Vsebina:	Content (Syllabus outline):
<ul style="list-style-type: none">- Algoritmi za analizo zaporedij, iskanje podzaporedij, iskanje motivov.- Določanje zaporedja genomov, algoritmi na grafih.- Primerjava zaporedij, dinamično programiranje.- Algoritmi za filogenetsko analizo.- Skriti markovski modeli, analiza strukture genoma.- Analiza genskih izrazov, razvrščanje v skupine, klasifikacija, analiza obogatenosti genskih skupin.	<ul style="list-style-type: none">- Sequence analysis, search for subsequences, motif search.- Genome assembly, graph algorithms.- Comparison of biological sequences, dynamic programming.- Phylogeny algorithms.- Hidden Markov Models and gene prediction.

- Rekonstrukcija in analiza genskih mrež. - Vizualizacija podatkov.	- Gene expression analysis, clustering and supervised data mining, enrichment analysis. - Gene network reconstruction and analysis. - Data vizualization.
--	---

Temeljna literatura in viri/Readings:

- Durbin R, Eddy SR, Krogh A, Mitchison G (1998) Biological sequence analysis: probabilistic models of proteins and nucleic acids, Cambridge University Press. - Jones NC, Pevzner PA (2004) An introduction to bioinformatics algorithms, The MIT Press. - Pavel A. Pevzner, Phillip Compeau (2018) Bioinformatics Algorithms: An Active Learning Approach , Active Learning Publishers. Ostalo: revijalni članki s področja, tekoča periodika in druga učna gradiva.

Cilji in kompetence:

Študentje se bodo pri predmetu naučili implementirati vrsto algoritmov, ki jih lahko uporabimo na področju bioinformatike in sistemske biologije. Znalci bodo razbrali, na kater tip biološki vprašanj lahko odgovorimo z razvojem in uporabo računskih pristopov.	Objectives and competences: Students completing the course should be able to implement a variety of bioinformatics and systems biology algorithms, and learn which type of biological questions can be answered by means of computational approaches.
--	---

Predvideni študijski rezultati:

Študentje se bodo seznanili z glavnimi razredi algoritmov, ki so uporabljajo na področju bioinformatike in lahko z njimi analiziramo zaporedja, grafe in podatke o meritvah iz molekularne biologije. Na praktičnih primerih analize velike množice podatkov bodo spoznali probleme pri razvoju teh algoritmov, ki so vezani na hitrost izvajanja in uporabo spomina. Izpopolnili bodo svoje predznanje programiranja in v praksi uporabili predznanja s področja verjetnosti in statistike.	Intended learning outcomes: Students will become familiar with main classes of computational approaches and algorithms in bioinformatics. The algorithms that they will design in a class are those from sequence and graph analysis and analysis of data coming from experimental measurements in molecular biology. In practical cases of analysis of large data sets they will need to cope with problems of computational efficiency and limited data storage (computer memory). They will advance their knowledge of programming, and use their previously developed skills in probability and statistics in practical problems from systems biology.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Diplomanti enovitih magistrskih študijskih programov in študijskih programov 2. stopnje s področja biomedicinskih, biotehniških. Splošni pogoji za vpis na doktorski študij.

Prerequisites:

Graduates of unified master's degree programs and 2nd degree programs of biomedical and biotechnical sciences.
General conditions for enrollment in doctoral studies.

Vsebina:

1 Sodobni trendi na področju biomaterialov (implanti . podlaga za vzgojo celičnih kultur, kompatibilnost biomaterialov, tehnike za moduliranje biokompatibilnosti)

Content (Syllabus outline):

1 Modern trends in biomaterials (implants as a basis for bringing cell cultures compatibility of biomaterials, techniques to modulate the biocompatibility)

2 Mejne površine med biokompatibilnimi materiali in biosistemi	2 Interfaces between biocompatible materials and bio systems
3 Pregled najpogostejših biokompatibilnih materialov in novih tehnologij v ortopedski kirurgiji	3 Review of new technologies in orthopedic surgeries
4 Pregled fizikalno kemijskih pojavov na površinah brezcementnih endoprotez kolka (omočljivost, hrapavost in odziv celic)	4 Review of physicochemical phenomena the surface of uncemented hip endoprostheses (surface wetting and roughness and cell response)
5 Pregled procesov osteointegracije deponiranih multifunkcijskih nanostrukturiranih plasti na površini kovinskih biokompatibilnih materialov z namenom izboljšati osteointegracijo vsadka s kostjo.	5 Review of osteointegration proceses of multifunction coatings on nanostructured surface of metallic materials with the aim to improve osteointegration between implant and bone.

Jeziki/Languages:

Predavanja/Lectures:	Angleščina, Slovenščina
Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Splošni pogoji za vpis na doktorski študij.	Prerequisites: General conditions for enrolment in doctoral studies.
---	---

Vsebina:

Predmet je namenjen študentom s srednješolskim znanjem biologije. Njegova vsebina je posebej prilagojena vsakemu študentu. Poučevanje je zelo neformalno in omogoča dovolj časa za razpravo ter vprašanja, s ciljem navdušiti študente, tako da jim da nekaj osnov biologije. Študentje bodo spoznali osnovne gradnike življenja od molekul do celic, razumeli mehanizme za replikacijo, transkripcijo in translacijo DNA ter kako se celice organizirajo v

Content (Syllabus outline):

The course is designed for students with high school knowledge of biology and the content is specifically tailored to the individual student. The class is very informal and allows ample time for discussion and questions. The goal is to get students excited about basic biology. Students learn about the basic building blocks of life, from molecules to cells, and understand the mechanisms and machinery of DNA replication, transcription, and translation, as well as

<p>prostoru in času. Razumeli bodo osnovno molekularno biologijo gena in temeljne celične procese, povezane z energijo. Prikazana bo organizacija rasti rastlin in živali s poudarkom na evolucijski razvojni biologiji, ki temelji na izražanju genov in genski regulaciji.</p>	<p>the organization of cells in space and time. The organization of plant and animal growth is demonstrated, with emphasis on evolutionary developmental biology based on gene expression and gene regulation.</p>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij	General requirements for doctoral study.

Vsebina: Študenti pri predmetu spoznajo zgodovino razvoja in raziskovanja biološkega izobraževanja. Seznanijo se s sodobnimi smernicami raziskovanja na omenjenem področju, ki posega tako v formalna kot neformalna učna okolja. S pregledom in analizo znanstvene literature področja spoznajo pomen razvijanja naravoslovnih kompetenc ter sodobne metode in oblike pedagoškega dela. Na praktičnih primerih spoznajo pomen in vlogo	Content (Syllabus outline): The students will become familiar with the history of biology education and research in this area. They will learn about current research trends in the area, which extends both to formal and informal learning environments. By reviewing and analysing scientific literature, they become aware of the significance of developing natural science competencies and contemporary teaching methods and types. On the basis of practical examples, they learn about the
--	---

<p>izkustvenega učenja in raziskovalnega pouka ter razvoj kritičnega mišljenja z vključevanjem obravnave družbeno-znanstvenih tem v biološko izobraževanje. Na podlagi priprave, izvedbe, analize in evalvacije dveh nastopov, enega v formalni učni ustanovi in enega v obliki predstavitve širši javnosti (neformalno učno okolje), študenti spoznajo pomen promocije znanosti za razvoj naravoslovne pismenosti.</p>	<p>significance and role of experience-based learning and learning through inquiry. They also learn about the importance of development of critical thinking by including socio-scientific issues in biology education. By preparing, delivering, analysing and evaluating two instructional units, one for a formal learning environment and the other as part of a presentation to the wider public (informal learning environment) the students learn about the significance of promoting science for development of scientific literacy.</p>

[COBISS.SI-ID [4876651](#)]
- Znanstveni članki na tem področju / state of the art papers.

Cilji in kompetence:

Osnovni cilj predmeta je podati študentom teoretična in praktična znanja s področja interakcije nanostrukturiranih površin s celično membrano in vloge biomehanike in biofizike pri funkciji endoprotez.

Objectives and competences:

The main objective of the course is to give students theoretical and practical knowledge in techniques for the study of biocompatibility and its modulation, interactions of nanostructured surfaces with the cell membrane and the role of biomechanics and biophysics in the function of endoprostheses.

Predvideni študijski rezultati:

- poznavanje biofizikalnih procesov in njihovih matematičnih modelov stika inženjerskih materialov in tkiv
- uporaba matematičnih modelov pri načrtovanju zdravljenja z endoprotezami in pri rehabilitaciji

Intended learning outcomes:

- knowledge on biophysical processes and their mathematical models of junction of engineered materials and tissues
- use of mathematical models of the interface between engineered materials and tissues in planning of treatment and rehabilitation

Metode poučevanja in učenja:

- Predavanja
- Individualno delo na projektih
- Predstavitve in interpretacije rezultatov projektov ostalim študentom v skupini v seminarski obliki
- Diskusija o objavljenih člankih iz izbranih tem (kritično vrednotenje znanstvene literature, predstavitev »case studies«)

Learning and teaching methods:

- lectures
- Individual project work
- Presentation and interpretation of results of project work to the other students in open discussion
- Journal club – discussion of published research articles on selected topics (critical evaluation of scientific literature, presentation of the "case studies")

Načini ocenjevanja:

Preverjanje znanja poteka v obliki projektne naloge na realnih primerih iz raziskovalne prakse, v kateri študentje pripravijo rešitve za izbrani predlog raziskovalnega projekta. Projektne naloge oddajo v pisni obliki in jih zagovarjajo v ustni obliki, v diskusiji z nosilcem predmeta in sodelujočimi profesorji ter ostalimi študenti.

Delež/Weight

50,00 %

Assessment:

During the course students prepare individual projects of real cases from research practice, where students prepare solutions for determined research project proposal. They prepare final project work and defend it in the classroom in discussion with professors and other students.

Študent pripravi tudi seminar iz tematike doktorata v povezavi z eno od vsebin predmeta. Pri tem sodelujeta mentor in nosilec predmeta oz. drugi izvajalci predmeta. Zagovor opravlja študent pred mentorjem in nosilcem in/ali drugim izvajalcem ali v obliki sodelovanja na simpoziju.	50,00 %	Student prepares a doctoral seminar on the topic related to one of the course. In this cooperate menthor and lecturer or/and other professors. Student defend the seminar in front of mentor and lecturer and/or other professors or in the form of participation in a symposium.

BIOMETEOROLOŠKO MODELIRANJE

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Biometeorološko modeliranje
Course title:	Biometeorological modeling
Članica nosilka/UL	UL BF
Member:	

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Bioznanosti, tretja stopnja, doktorski (v postopku)	Ni členitve (študijski program)		Celoletni	izbirni

Univerzitetna koda predmeta/University course code:	0037241
Koda učne enote na članici/UL Member course code:	3743

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
10	20	0	0	15	80	5

Nosilec predmeta/Lecturer: izr. prof. dr. Tjaša Pogačar

Izvajalci predavanj:	Zalika Črepinšek, izr. prof. dr. Tjaša Pogačar
Izvajalci seminarjev:	Zalika Črepinšek, izr. prof. dr. Tjaša Pogačar
Izvajalci vaj:	
Izvajalci kliničnih vaj:	
Izvajalci drugih oblik:	
Izvajalci praktičnega usposabljanja:	

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij	General conditions for enrolment in doctoral studies.

Vsebina:	Content (Syllabus outline):
Interakcije rastilna-ekositem-atmosfera Opredelevanje pomembnih aspektov s področij mikrometeorologije, fizike tal, ekologije in biogeokemije uporabljenih v biometeorologiji. Viri podatkov, merjenja in instrumenti v biometeoroloških študijah. Modeli vodnega cikla. Kvantificiranje intercepcije in odtoka padavin. Metode za računanje	Plant-Ecosystem-Atmosphere Interactions relevant aspects of micrometeorology, soil physics, physiological ecology, ecosystem ecology and biogeochemistry. Instrumentation and measurements, associated with the study of plant biometeorology. Water cycle models. Quantifying Interception of precipitation, outflows on stems and trunks. Methods

<p>evapotranspiracije (aerodinamične in statistične). Modeli za trajanje omočenosti lista. Modeli razvoja in rasti poljščin. Potrebne parametrizacije rastlinske odeje. Preprosti statistični modeli v agrometeorologiji. Dinamični modeli in pogonske spremenljivke v njih. Generični modeli. Fenološko modeliranje. Statistični modeli v agrofenologiji. Verifikacija modelov in njihova občutljivost. Učinki podnebnih sprememb na fenološke cikle rastlin in živali. Nehotene spremembe atmosferskega dela okolja – vloga človeka. Onesnaženje zraka, podnebne spremembe, ozonska luknja, odnos globalni-lokalni okoljski problemi. Slabšanje razmer v okolju skupaj z deforestacijo in dezertifikacijo. Biometeorološki modeli in urbano okolje, Spremembe masnih in energijskih tokov v urbaniziranem prostoru. Klima zaprtih prostorov in povezava s počutjem ter zdravjem človeka. Vpliv podnebja na prostorsko planiranje in arhitekturo mest</p>	<p>for evapotranspiration calculation – aero dynamical, radiation, empirical. Modelling leaf wetness duration. Crop models. Parameterization of plant canopy in models. Simple statistical and dynamical agro meteorological models. Meteorological driving variables and parameters. Terrestrial phenological modeling. Statistical, causal and dynamical models. Verification, calibration, sensitivity of models. The effects of climate change on plant life cycle events. The inadvertent modification of the atmosphere by living systems, especially human (studies of pollution, climate change impacts, changes to atmospheric amenity, and the processes of deterioration of landscape including deforestation and desertification) Biometeorological models of the built environment The intentional modifications of natural energy and matter flows within urban areas, and indoor climate constructions. Modeling indoor climate, urban design, and architecture.</p>

Cilji in kompetence:

- Pridobitev poglobljenega znanja o vplivu vremena in podnebja na žive organizme na podlagi fizikalnega pristopa.
- Modeliranje procesov, ki vplivajo na rast in razvoj živih organizmov in kvantitativne metode za oceno vpliva podnebja na agroekosisteme.

Objectives and competences:

- Understanding of weather and climate impact on living organisms and physical factors that influence climate.
- Knowledge of approaches to model processes that influence agroecosystems and methods to quantify vegetation-climate interactions.

Predvideni študijski rezultati:

Znanje in razumevanje
Podrobnejši vpogled v interakcije med atmosferskim delom okolja in živimi organizmi (vegetacija, fauna, človek)
Uporaba: Uporaba fizikalnih zakonov in preprostih modelov za razumevanje biometeoroloških procesov
Refleksija: Povezava interakcije med atmosfero, človeškim delovanjem s fizikalnimi zakoni.

Intended learning outcomes:

Knowledge and understanding:
Deeper understanding of the interactions between atmospheric processes and living organisms (plants, animals, and humans)..
Applicability: The use of basic physical laws and simple models to understand biometeorological processes
Reflection: Interactions between atmosphere and organisms and their description by physical laws.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, vaje, seminar ob uporabi informacij o stanju podnebnega sistema iz različnih virov	Lectures, tutorials, seminars using information on state of the climate from different sources
--	--

Načini ocenjevanja:	Delež/Weight	Assessment:
Predstavitve seminarja	60,00 %	Problem-solving seminars,
Ustni izpit iz teorije	40,00 %	Theoretical examination.

Ocenjevalna lestvica:	Grading system:
5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	5 - 10, a student passes the exam if he is graded from 6 to 10

Izvajalci seminarjev:
Izvajalci vaj:
Izvajalci kliničnih vaj:
Izvajalci drugih oblik:
Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij	General conditions for enrolment in doctoral studies.

Vsebina: V uvodnem delu je predstavljena procesna tehnika v okviru termičnega, mehanskega, bio-, kemijskega in okoljskega segmenta procesne tehnike. Termodinamične osnove ločevalnih procesov temeljijo na predstavitvi zmesi in raztopin, parno-kapljevitnega ravnotežja, Gibbsovega pravila faz, binarnih sistemov, Raultovega zakona idealnih raztopin, Henrijevega zakona ter predstavitve onovnih značilnosti ternarnih sistemov in	Content (Syllabus outline): In the introductory chapter, process technology is presented within the framework of thermal, mechanical, biochemical, chemical and environmental segments of process engineering. Thermodynamic fundamentals of separation processes based on presentation of mixtures and solutions, vapor-liquid equilibrium, Gibbs free energy, binary systems, Rault's law of ideal solutions, Henri's law and fundamental characteristics of ternary systems and
---	--

<p>azeotropnih zmesi. V okviru Prenosa snovi bo izhodišče Fickov zakon, difuzija, konvektivni prenos snovi ter numerične metode reševanja problemov prenosa snovi. Sledijo osnovni procesi procesne tehnike: uparjanje, destilacija, rektifikacija, sorpcijski procesi, kristalizacija in sušenje z podrobnejšo obravnavo vlažnega zraka, h - x diagrama in eksergijskega diagrama vlažnega zraka, večstopenjskega sušenja, vrste sušilnikov in izbira sušilnega procesa v odvisnosti od vrste blaga v farmacevtski, prehrabeni in procesni industriji, liofilizacija. Sledijo mešanje, membranske tehnologije, mikro, ultra in nanofiltracija, reverzna osmoza in ionska izmenjava. V okviru bioreaktorjev bodo obravnavane vrste in njihova uporaba ter vodenje in nadzor procesov.</p>	<p>azeotropic mixtures. Within the framework of mass transfer, the starting points are Fick's law, diffusion, convective mass transfer and numerical methods of solving problems of mass transfer. These are followed by the basic processes of process technology: evaporation, distillation, rectification, sorbic processes, crystallization and drying with detailed consideration of moist air, h-x diagram and exergy diagram of moist air, multi-level drying, types of dryers and selection of the drying process depending on the type of goods in the pharmaceutical, food and process industries, liofilisation. Mixing, membrane technologies, micro-, ultra- and nanofiltration, reversible osmosis and ionic exchange follow. Within the framework of bioreactors the types and their application are considered, together with process management and control.</p>

Cilji in kompetence:

<p>Cilj predmeta je seznaniti študenta z osnovami bioprocene tehnike in ga usposobiti za uporabo inženirskih orodij ob hkratnem utrjevanju inženirskega pristopa k reševanju problemov bioprocene tehnike. Seznanijo se z osnovnimi snovnimi operacijami, ki temeljijo na snovnih in energijskih tokovih ter fazno ravnotežnih fenomenih. Spoznajo principe in osvojijo metode za delo na področju uporabe metod, sistemov in procesov priprave, ločevanja in čiščenja nečistih snovi s ciljem dobiti čiste produkte.</p>	<p>Objectives and competences:</p> <p>The course aims to acquaint students with the fundamentals of bioprocess technology and qualify them for application of engineering tools, while revising the engineering approach in order to solve problems from bioprocess technology. Students are familiarised with basic matter operations, based on mass and energy flows and phase equilibrium phenomena. They are familiarised with principles and methods for working in the field of application of methods, systems and processes of preparation, separation and purification of impure substances in order to obtain pure products. The subject develops the ability to apply engineering, technical, mathematical and scientific tools for solving engineering problems in nature.</p>
---	---

Predvideni študijski rezultati:

<p>Predmet razvija sposobnost uporabe inženirskih, tehničnih, matematičnih in znanstvenih orodij za reševanje inženirskih problemov v naravi. Osvojene kompetence predstavljajo gradnik usposobljenosti biti vodja in biti vodilni člen razvojno raziskovalne dejavnosti v kreativnem, komunikativnem timskem</p>	<p>Intended learning outcomes:</p> <p>The acquired competences qualify the participants to be leaders and leading members of the development-research sector in creative, communicative team work in the field of biotechnology. The competences specific to the subject qualify the participants to identify the problems and engineering approach to</p>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis na doktorski študij; zaključen drugostopenjski ali star univerzitetni študij biotehnologije, kemijskega inženirstva, biokemije, kemije, farmacije, mikrobiologije, živilske tehnologije in sorodnih programov

Prerequisites:

Enrollment to the doctoral study; completed **Bologna** 2nd Cycle **Study** Program or university study in biotechnology, chemical engineering, biochemistry, chemistry, pharmacy, microbiology, food technology or related studies

Vsebina:

Predstavljeni bodo sodobni inženirski trendi in izolacije bioloških makromolekul (kot so encimi, monoklonska protitelesa, plazmidna DNA), virusov (bakteriofagov in humanih virusov) in celic (matične

Content (Syllabus outline):

Modern engineering trends and isolation of biological macromolecules (such as enzymes, monoclonal antibodies, plasmid DNA), viruses (bacteriophages and human viruses) and cells (stem cells) will be

<p>celice), ki so in bodo pomembni na področju varnosti, prehrane in zdravja.</p> <p>Glavni poudarek predmeta bo na različnih tehnikah izolacije obravnavanih bioproduktov na osnovi obarjanja, ekstrakcije z dvofaznimi vodnimi sistemi, kromatografij, vključno s sodobnimi trendi kontinuirnih procesov ter njihova uporaba v biokonverziji, s poudarkom na mikroreaktorjih.</p> <p>Študentje bodo seznanjeni z osnovami načrtovanja eksperimentov s poudarkom na QbD (Quality by Design), regulatornimi aspekti pridobivanja farmacevtskih učinkovin in s tem povezano specifično analitiko npr. PAT (Process Analytical Technology). Predstavljeni bodo tudi konkretni primeri procesov.</p> <p>Za specifična področja so lahko vključeni drugi predavatelji.</p>	<p>presented, which are important in the field of safety, nutrition and health.</p> <p>The main focus of the course will be on various isolation techniques of the considered bioproducts based on precipitation, extraction with two-phase aqueous systems, chromatography, including modern trends in continuous processes and their use in bioconversion, with an emphasis on microreactors.</p> <p>Students will be familiar with the basics of experimental design with an emphasis on QbD (Quality by Design), regulatory aspects and related specific analytics e.g. PAT (Process Analytical Technology). Specific examples of processes will also be presented.</p> <p>Other lecturers may be involved for specific areas.</p>

Temeljna literatura in viri/Readings:

Izbrana poglavja iz Hessel, V., Renken, A., Schouten, J.C., Yoshida, J.-I. (2009) editors, Micro Process Engineering: A Comprehensive Handbook, Vol. 1-3, Wiley-VCH Verlag GmbH & Co. KGaA, Weinheim, Germany

Izbrana poglavja iz Buchholz K., Kasche V., Bornscheuer U.T. (2012) Biocatalysts and Enzyme Technology, 2nd Edition

Izbrana poglavja iz Carta G., Jungbauer A. Protein Chromatography: Process Development and Scale-Up, Wiley-VCH, Weinheim, 2010 (priporočena literatura)

Izbrana poglavja iz Subramanian G. (Eds.). Biopharmaceutical production technology. Weinheim: Wiley-VCH, 2012 (priporočena literatura)

Znanstveni članki iz tekoče znanstvene periodike.

Cilji in kompetence:

- Razumevanje teoretičnih principov tehnologij uporabljenih pri pridobivanju in izolacijah bioloških makromolekul, virusov in celic
- Razumevanje načrtovanja eksperimentov pri zaključnih procesih
- Razumevanje koncepta kontinuirnih procesov in mikroreaktorjev
- Razumevanje načrtovanja in vodenja biokatalitskih procesov
- Razumevanje regulatornih konceptov

Objectives and competences:

- Understanding theoretical principles of techniques used for production of biologic molecules, viruses and cells
- Understanding concepts of experimental design for downstream processing
- Microreactors and continuous processes
- Understanding design and performance of biocatalytic processes
- Understanding of regulatory concepts

Predvideni študijski rezultati:

- Sposobnost vključevanja pridobljenega znanja v projektu
- Izkazano doseganje izobraževalnih ciljev

Intended learning outcomes:

- Implementation of acquired knowledge in projects
- Demonstrated achievement of educational goals

Metode poučevanja in učenja:

- predavanja
- seminarji (v obliki rednih seminarjskih predstavitev z diskusijami)

Learning and teaching methods:

- lectures
- seminars (regular presentations with discussions)

Načini ocenjevanja:	Delež/Weight	Assessment:
Preverjanje znanja poteka v obliki projektne naloge na realnih primerih iz raziskovalne prakse, pri kateri študentje pripravijo rešitve za izbrani predlog raziskovalnega projekta. Projektne naloge oddajo v pisni obliki in jih predstavijo v ustni obliki, čemur sledi diskusija. Izbrani primer je blizu tematike doktorskega raziskovanja kandidata.		During the course students prepare individual projects of relevant case from research practice, they present it in form of written seminar and they also present it, what is followed by discussion. Selected topic is close to doctoral research work of the candidate.

Ocenjevalna lestvica:	Grading system:
5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	5 - 10, a student passes the exam if he is graded from 6 to 10

Izvajalci predavanj:	prof. dr. Igor Plazl
Izvajalci seminarjev:	
Izvajalci vaj:	
Izvajalci kliničnih vaj:	
Izvajalci drugih oblik:	
Izvajalci praktičnega usposabljanja:	

Vrsta predmeta/Course type:	teoretični/theoretical
------------------------------------	------------------------

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Diplomanti enovitih magistrskih študijskih programov in študijskih programov 2. stopnje s področja biomedicinskih, biotehniških in naravoslovno matematičnih usmeritev.

Prerequisites:

Graduates of uniform master programmes and 2nd cycle programmes of biomedical, biotechnical, mathematical and natural sciences

Vsebina:

- biokemijska inženirska analiza in modeliranje;
- bioprocena kinetika: rast mikroorganizmov (Monod, rast na več substratih, inhibicija,...), kinetika encimskih reakcij (Michaelis- Menten,...);

Content (Syllabus outline):

- modelling and analysis of biochemical engineering processes;
- bioprocess kinetics: growth of microorganisms (Monod, growth on multiple substrates, inhibition, ...), enzyme kinetics (Michaelis-Menten,...);

<ul style="list-style-type: none"> • snovne in energijske bilance: reakcijski in separacijski bioprocesi; entalpijske spremembe; • osnove dinamike tekočin: idealni in neidealni tokovni modeli, napoved 3D hitrostnih profilov eno- in večfaznih sistemov; • osnove numerične analize: reševanje navadnih diferencialnih enačb: analitična metoda, Eulerjeva metoda, Rungejeva trapezna metoda, Runge-Kutta-klasična metoda četrtega reda, sistem navadnih diferencialnih enačb, numerično integriranje; numerično reševanje parcialnih diferencialnih enačb: eksplicitna in implicitna metoda končnih razlik, analitična in numerična rešitev Laplaceove enačbe; • zapis in reševanje ohranitvenih enačb; • razvoj 2D in 3D matematičnih modelov, ki vključujejo tok tekočin in reakcijsko-difuzijske člene; • uporaba računalniških orodij (npr.: Mathematica, Comsol, Matlab); • izbrani primeri modeliranja bioprocsov (encimska reakcija z raztopljenim katalizatorjem v eno- ali dvofaznem sistemu; biotransformacija v mikroreaktorju s pritrjenimi encimi ali celicami; šaržni in kontinuirni proces biotransformacije progesterona z imobilizirano biomaso; modeliranje biološke čistilne naprave,...). 	<ul style="list-style-type: none"> • mass and energy balances: reaction and separation bioprocesses; enthalpy changes; • basic fluid dynamics: ideal and nonideal flow models, 3D velocity profile prediction of single and multiphase flow; • numerical analysis basics: ordinary differential equations (exact solutions, Euler's method, Euler trapeze method, Runge-Kutta methods, systems of ordinary differential equations, numerical integration; numerical solution of partial differential equations: explicit and implicit finite difference methods, analytical and numerical solution of Laplace's equation; • conservation equations; • development of 2D and 3D mathematical models considering velocity profile and reaction diffusion dynamics terms; • applications of computational tools (<i>Mathematica, COMSOL, Matlab</i>); • bioprocess modelling of selected cases (modelling and experimental studies on enzyme-catalyzed reaction in a microreactor; biotransformation in a microreactor with surface immobilized enzymes or cells; batch and continuous steroid biotransformation process with immobilized biomass; modelling of a pilot wastewater treatment plant,..).

Special issue of Animals ISSN 2076-2615
--

Cilji in kompetence:

Slušatelji spoznajo osnovne postopke povezane z biotehnoškimi ukrepi v reprodukciji domačih živali. Seznanijo se z metodami za pridobivanje, gojenje in manipulacijo zarodkov. Ta znanja povežejo z bioinformatičnimi pristopi in analizami za proučevanje genske ekspresije v predimplantacijskem stanju in z metodami genomske diagnostike. komparativni pristop omogoča razvijanje adaptiranih metod za genetsko/genomsko spremljanje uravnavanja genske ekspresije med oploditvijo in implantacijo.

Objectives and competences:

Students learn the basic procedures associated with biotechnological measures in the reproduction of domestic animals. They become acquainted with methods for obtaining, culturing and manipulating embryos. They combine this knowledge with bioinformatics approaches and analyzes to study gene expression in the preimplantation state using genomic diagnostic methods. The comparative approach enables the development of adapted methods for genetic / genomic monitoring of the regulation of gene expression from fertilization to implantation.

Predvideni študijski rezultati:

Znanje in razumevanje:
Študentje se seznanijo z osnovnimi principi embriogeneze in biotehnoškimi možnostmi za poseganje v razvoj zarodka. Poleg tega pridobijo tehnična in bioinformatična znanja za spremljanje genske ekspresije v predimplantacijskih zarodkih.

Intended learning outcomes:

Knowledge and understanding:
Students gain basic knowledge about early embryogenesis and biotechnological methods for its manipulation. In addition, they get technical and bioinformatic knowledge for the survey of gene expression in preimplantational embryos.

Metode poučevanja in učenja:

Seminarji, konzultacije, laboratorijske vaje.

Learning and teaching methods:

Seminars, consultations, laboratory exercises.

Načini ocenjevanja:

- seminarska naloga na temo eksperimentalne embriologije
- pisni izpit

Delež/Weight

40,00 %
60,00 %

Assessment:

- Seminar work on experimental embryology
- Written Exam

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

revijalni članki s področja, tekoča periodika, druga učna gradiva...

Cilji in kompetence:

Temeljni izobraževalni cilj je poglobitev znanja na področju inter- in intraspecifičnih odnosov med živimi organizmi v agroekosistemih ter načinov njihovega podnebnim in geografskih razmeram Slovenije prilagojenega zatiranja, s poudarkom na okolju in človeku sprejemljivejših metodah.

Objectives and competences:

Fundamental objective of the course is deepening the knowledge in the fields of inter- and intraspecific relationships between living organisms in agroecosystems and the knowledge about the methods of their control, which are adapted to Slovenian climate and geographical conditions, with special emphasis on environmentally and human acceptable methods.

Predvideni študijski rezultati:

Znanje in razumevanje:

Predviden študijski rezultat je kandidatovo razumevanje odnosov med živimi organizmi (zlasti na relaciji rastline – škodljivi organizmi – koristni organizmi) v agroekosistemih.

Intended learning outcomes:

Knowledge and understanding:

Intended learning outcome is to qualify the candidate to understand the relationships between living organisms (especially in relation plants – harmful organisms – beneficial organisms) in agroecosystems.

Metode poučevanja in učenja:	Learning and teaching methods:
Predavanja, seminarji, konzultacije, samostojno delo.	Lectures, seminars, consultations, individual work.

Načini ocenjevanja:	Delež/Weight	Assessment:
pisni izpit Pogoja za opravljanje študijskih obveznosti – pisnega izpita je zagovor seminarja Pogoja za opravljanje študijskih obveznosti – pisnega izpita: - zagovor seminarja	70,00 %	Conditions for performing study obligations - written exam is seminar performed written exam Conditions for performing study obligations - written exam: - seminar performed
samostojno delo študenta	30,00 %	individual work of the student

Ocenjevalna lestvica:	Grading system:
5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	5 - 10, a student passes the exam if he is graded from 6 to 10

Izvajalci drugih oblik:
Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: teoretični /theoretical

Jeziki/Languages: Predavanja/Lectures: Angleščina, Slovenščina
Vaje/Tutorial: Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Diplomanti enovitih magistrskih študijskih programov in študijskih programov 2. stopnje s področja biomedicinskih, biotehniških znanosti. Splošni pogoji za vpis na doktorski študij.

Prerequisites:

Graduates of unified master's degree programs and 2nd degree programs of biomedical and biotechnical sciences.
General conditions for enrollment in doctoral studies.

Vsebina:

1. Pregled najpogostejših kirurških načinov zdravljenja bolezni ušes ter lateralne in sprednje lobanjske baze
2. Pregled vloge tujih in telesu lastnih materialov in substanc v otorinolaringologiji
3. Sestava, priprava in uporaba plazme, bogate s trombociti in zunajceličnimi vezikli v medicini.

Content (Syllabus outline):

1. An overview of the most common surgical treatments for ear disease and the lateral and anterior skull-base
2. Review of the role of foreign and the body's own materials and substances in otorhinolaryngology
3. Composition, preparation and use of platelet-rich plasma and extracellular vesicles in medicine.

<p>4. Pregled uporabe mitomicina v zdravljenju zoženosti zunanega sluhovoda</p> <p>5. Pregled uporabe vsadkov v otorinolaringologiji</p> <ol style="list-style-type: none"> 1. polžev vsadek 2. kostno-vsdran slušni pripomoček <p>6. Merila za oceno izida zdravljenja</p> <ol style="list-style-type: none"> 1. objektivna: merjenje površin, klinični točkovniki, itd.. 2. subjektivna: merila za oceno z zdravjem povezane kakovosti življenja <p>7. Pregled najpogostejših biokompatibilnih materialov in novih tehnologij v ortopedski kirurgiji</p> <p>8. Pregled pojavov na površinah brezementnih endoprotez kolka (omočljivost, hrapavost in odziv celic)</p> <p>9. Pregled procesov osteointegracije deponiranih multifunkcijskih nanostrukturiranih plasti na površini kovinskih biokompatibilnih materialov z namenom izboljšati osteointegracijo vsadka s kostjo.</p>	<p>4. Review of the use of mitomycin in the treatment of external auditory canal narrowing</p> <p>5. Review of the use of implants in otorhinolaryngology</p> <ol style="list-style-type: none"> 1. cochlear implant 2. bone-anchored hearing aid <p>6. Criteria for assessing treatment outcome</p> <ol style="list-style-type: none"> 1. objective: surface measurement, clinical scores etc. 2. subjective: health-related quality of life questionnaires <p>7. An overview of the most common biocompatible materials used in orthopedic surgery j</p> <p>8. Review of phenomena the surface of uncemented hip endoprostheses (surface wetting and roughness and cell response)</p> <p>9. Review of osteointegration proceses of multifunction coatings on nanostructured surface of metallic materials with the aim to improve osteointegration between implant and bone.</p>

Cilji in kompetence:	Objectives and competences:
<p>Spoznavna uporabe biokemičnih, bioaktivnih pripravkov, mehanskih ter elektromagnetnih vsadkov ter pripravkov iz telesnih tekočin ljudi pri izboljševanju rezultatov klasičnih kirurških tehnik na področju:</p> <ul style="list-style-type: none"> • Kroničnih vnetij senčnične kosti • Zdravljenju kroničnih vnetij srednjega ušesa • Zagotavljanju sluha gluhih osebami • Zapori operativnih pristopov na stranski in sprednji lobanjski bazi. <p>Študent pridobi osnovno znanje za razumevanje na področju bio inženirskih materialov in tkiv za aplikacije v ortopedski kirurgiji in rehabilitaciji</p>	<p>Learns about the use of biochemical, bioactive preparations, mechanical and electromagnetic implants and preparations from human body fluids in improving the results of classical surgical techniques in the field of:</p> <ul style="list-style-type: none"> • Chronic temporal bone inflammation • Treatment of chronic otitis media • Hearing rehabilitation in deaf people • Closure of surgical approaches to the lateral and anterior skull-base. <p>Student get the basic knowledge and understanding in the field of bio engineering materials and tissues for the applications in orthopedic surgery and rehabilitation</p>

Predvideni študijski rezultati:	Intended learning outcomes:
<p>Znanje in razumevanje:</p> <ul style="list-style-type: none"> • Interdisciplinarni znanstveni pristopi pri kirurškem zdravljenju • Pomen izboljševanja klasičnih kirurških tehnik • Metode sledenja kirurškim rezultatov • Identifikacija neuspehov klasičnih kirurških tehnik • Iskanje področij in načinov za izboljševanje končnih rezultatov • Metode sledenja kirurških rezultatov na osnovi raziskav predčasno odpovedanih endoprotez kolka in kolena • Iskanje novih kombinacij biomaterialov za izboljšanje dobe trajanja vsadkov 	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> • Interdisciplinary scientific approaches in surgical treatment • The importance of improving classical surgical techniques • Methods of tracking surgical results • Identification of failures of classical surgical techniques • Finding areas and ways to improve the treatment outcome <p>--Methods of following surgical results on the base of the investigations of prematurely failed hip and knee endoprosthesis</p> <p>Finding new biomaterials combinations with the aim to improve lifetime of implants</p>

Metode poučevanja in učenja:	Learning and teaching methods:
<p>Predavanja, diskusijske delavnice predstavljenih seminarjev</p> <p>Demonstracija že vpeljanih biomedicinskih metod v kirurgiji</p> <p>Predstavitev dosedaj obstoječe literature</p> <p>Seznanitev z potekajočimi raziskavami</p> <p>Smernice za nadaljnje razvijanje področja</p>	<p>Lectures, discussion workshops of presented seminars</p> <p>Demonstration of already introduced biomedical methods in surgery</p> <p>Presentation of existing literature</p> <p>Familiarization with ongoing research</p> <p>Guidelines for further development of the field</p>

Načini ocenjevanja:	Delež/Weight	Assessment:
Ustni in ali pisni izpit	50,00 %	Written or oral examination;
Priprava in zagovor seminarja	20,00 %	Written seminar and its presentation;
Vsebinska priprava manjšega projekta	30,00 %	Preparation of the short project.

Ocenjevalna lestvica:

Grading system:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

5 - 10, a student passes the exam if he is graded from 6 to 10

DENDROEKOLOGIJA, RASTNE IN STRUKTURNE ZNAČILNOSTI GOZDNIH SESTOJEV

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Dendroekologija, rastne in strukturne značilnosti gozdnih sestojev
Course title:	Dendroecology, growth and structure characteristics of forest stands
Članica nosilka/UL Member:	UL BF

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Bioznanosti, tretja stopnja, doktorski (v postopku)	Ni členitve (študijski program)		Celoletni	izbirni

Univerzitetna koda predmeta/University course code:	0037335
Koda učne enote na članici/UL Member course code:	3838

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
10	10	15	0	5	85	5

Nosilec predmeta/Lecturer: Tomislav Levanič

Izvajalci predavanj:	izr. prof. dr. Matija Klopčič, Tomislav Levanič
Izvajalci seminarjev:	
Izvajalci vaj:	
Izvajalci kliničnih vaj:	
Izvajalci drugih oblik:	
Izvajalci praktičnega usposabljanja:	

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Dokončan drugostopenjski študij biologije, biotehnologije, gozdarstva, krajinske arhitekture ali primerljivih programov, lahko tudi končan univerzitetni študij po starih programih za omenjene smeri.
Upoštevajo se tudi splošni pogoji za vpis na doktorski študij

Prerequisites:

Completed second degree of studies of biology, biotechnology, forestry and landscape architecture or from comparable programs; eligible are also old programmes of above mentioned studies.
The general requirements for admission to doctoral studies are required

Vsebina:

Dendroekologija: osnove dendrokronološkega dela, načrtovanje vzorčenja, odvzem vzorcev, priprava za

Content (Syllabus outline):

Dendroecology: fundamentals of dendroecological research, sampling design, sample collection,

<p>merjenje, kontrola podatkov, datiranje in sinhroniziranje. Opis branike kot osnovne enota dendrokronologije. Anomalije branik. Tehnike standardizacije dendrokronoloških podatkov ter povezava med okoljskimi dejavniki (klima, ostali dejavniki) in različnimi podatki, vezanimi na braniko (širina, razmerje med ranim in kasnim lesom, širino ranega in kasnega lesa, gostoto, izotopsko zgradbo,...). Rastni procesi v sestoji: modeliranje rasti in razvoja sestojev. Napovedljivost in usmerljivost razvoja sestojev. Analiza in modeliranje kakovostne zgradbe sestoja ter vrednostnih karakteristik gozdnih ekosistemov. Kalkulacija in napoved donosov v sestoji. Odzivi gozdov na ukrepanje.</p>	<p>measurements, quality control of measured data, crossdating and synchronising. Tree-ring as a basic unit of dendrochronological studies, tree-ring anomalies. Standardisation of dendrochronological time series and statistical connection with environmental data (climate, other factors). Study of different tree-ring parameters, such as width, early- to latewood ratio, stable isotope composition,...) Growth processes in forest stands: modelling of growth and development of forest stands. Ability to predict and to guide forest stand development; analysis and modelling of stand quality structure, value characteristics of forest ecosystems. Calculations and forecasting of forest stand yields; response of forest on management activities</p>
---	---

--

Cilji in kompetence:

<p>Cilj je spoznati aktualne raziskovalne vsebine in tehnike s področij dendroekologije in prirastoslovja.</p>	<p>Objectives and competences:</p> <p>The aim is to learn about current research topics and techniques in the fields of dendroecology and growth and yield studies.</p>
--	--

Predvideni študijski rezultati:

<p>Znanje in razumevanje: Kandidat pridobi znanja o strukturi, rasti, razvoju gozdnih sestojev, njihovi odzivnosti na izvedene ukrepe in druge vplive. Spozna osnove dendroekologije; osvoji tehnike vzorčenja, merjenje, datiranja in sinhroniziranja drevesnih branik. Seznanitev z modeliranjem razvoja gozdnih sestojev ter z dendrokronološkimi metodami modeliranja odziva dreves na okoljske dejavnike.</p>	<p>Intended learning outcomes:</p> <p>Knowledge and understanding: The student acquires knowledge about the structure, growth and development of forest stands, their responsiveness to the measures taken and other environmental factors. Learn the basics of dendroecology; get familiar with the techniques of sampling, measurement, crossdating and synchronization of tree-ring sequences. Become familiar with the modelling techniques for the development of forest stands and with dendrochronological methods of modelling the response of trees to environmental factors.</p>
--	---

Metode poučevanja in učenja:

<p>Predavanja (izbrane vsebine), konzultacije, laboratorijske in seminarske vaje, terensko delo, vključitev v raziskovalni projekt.</p>	<p>Learning and teaching methods:</p> <p>Lectures (selected topics), consultations, laboratory and tutorials, fieldwork, inclusion in the research project.</p>
---	--

Načini ocenjevanja:	Delež/Weight	Assessment:
Seminarske naloge in izpit. Ocena izpita je povprečje ocene izpita, ocene seminarских del in ocene raziskovalne uspešnosti kandidata.	100,00 %	Seminar papers and exam. Exam score is the average of the assessment exam, evaluation seminar of the research and evaluation of student performance.

Ocenjevalna lestvica:	Grading system:
5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	5 - 10, a student passes the exam if he is graded from 6 to 10

DENDROLOGIJA IN GOZDNI GENSKI VIRI

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Dendrologija in gozdni genski viri
Course title:	Dendrology and forest genetic resources
Članica nosilka/UL Member:	UL BF

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Bioznanosti, tretja stopnja, doktorski (v postopku)	Ni členitve (študijski program)		Celoletni	izbirni

Univerzitetna koda predmeta/University course code:	0037336
Koda učne enote na članici/UL Member course code:	3839

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
10	30	0	0	0	85	5

Nosilec predmeta/Lecturer: prof. dr. Robert Brus

Izvajalci predavanj: prof. dr. Robert Brus
Izvajalci seminarjev:
Izvajalci vaj:
Izvajalci kliničnih vaj:
Izvajalci drugih oblik:
Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Zahtevani so splošni pogoji za vpis na doktorski študij.

Prerequisites:

General prerequisites for the enrollment in the doctoral study are required.

Vsebina:

Paleobotanika, paleoekologija, filogenija in biogeografija pomembnejših drevesnih družin, rodov in vrst, genetski vidiki evolucije, evolucijski procesi v naravnih populacijah gozdnih drevesnih vrst in speciacija, zgodovinski razvoj gozdov v svetu in Sloveniji. Ledenodobna zatočišča in poledenodobni razvoj glavnih drevesnih vrst. Raziskave populacij gozdnega drevja: naravna variabilnost in

Content (Syllabus outline):

Paleobotany, paleoecology, phylogeny and biogeography of important tree families, genera and species, genetic aspects of the evolution, evolutionary processes in natural populations of forest tree species and speciation, historical development of forests in the world and in Slovenia. Gglacial refugia and postglacial spread of main tree species. Research of the populations of forest tree species: natural

<p>prilagoditveni potencial izbranih drevesnih vrst, njen pomen in dejavniki, ki ju ogrožajo, novosti iz sistematike.</p> <p>Pomen gozdnih genskih virov in njihovega ohranjanja. Vpliv gospodarjenja z gozdom na genetsko strukturo populacij gozdnega drevja, pomen ohranjanja genetske variabilnosti kot pomembnega prilagoditvenega potenciala naravnih populacij gozdnega drevja. Oblikovanje sodobnih žlahtniteljskih programov za izbrane gozdne drevesne vrste. Biotehnologija v gozdarstvu, njeni možni vplivi na okolje in njihovo vrednotenje. Zunajgozdni nasadi drevesnih vrst, problematika vnašanja tujih drevesnih vrst. Invazivne drevesne vrste, njihov vpliv na stabilnost ekosistemov in možnosti njihovega obvladovanja.</p>	<p>variation and adaptive potential of selected tree species, their importance and threatening factors, new findings in taxonomy.</p> <p>The importance of forest genetic resources and their conservation. The impact of forest management on the genetic structure of populations of forest tree species, the importance of the conservation of genetic variation as important factor of the adaptive potential of the natural populations of forest trees. The design of contemporary forest tree breeding programmes.</p> <p>Biotechnology in forestry, its potential environmental impacts and their evaluation.</p> <p>Plantations of forest tree species outside forest, problems of the introduction of non-nativ tree species. Invasive tree species, their impact on the ecosystem stability and the measures for their management.</p>

- tekoča znanstvena periodika

Cilji in kompetence:

Izobraževalni cilji so nadgraditi temeljna znanja na področju dendrologije, gozdne genetike in ohranjanja gozdnih genskih virov, prav tako pa poglobiti razumevanje temeljnih mehanizmov in procesov pri gospodarjenju z gozdnimi ekosistemi.

Kompetence, ki jih pridobi kandidat, obsegajo poglobljeno znanje s področja in obvladovanje raziskovalnih metod. Pridobljeno poglobljeno temeljno znanje je sposoben povezovati in nadgrajevati z drugimi raziskovalnimi področji.

Objectives and competences:

Educational objectives include the upgrade of basic knowledge from the dendrology, forest genetics and conservation of forest genetic resources as well as the improvement of understanding of basic mechanisms and processes in the forest management.

Candidates' competences include deepened knowledge from the area and the mastering of research methods. He is capable to upgrade the acquired basic knowledge and to link it with other research areas.

Predvideni študijski rezultati:

Znanje in razumevanje: slušatelj se usposobi za samostojno raziskovalno delo na obravnavanem področju. Osvoji obvladovanje sodobnih raziskovalnih metod in izvajanja aplikativnih in temeljnih raziskav. Pridobi tudi spretnosti akademskega nastopanja in argumentiranja svojih stališč, prav tako je sposoben razumevanja načinov in pomena povezovanja raziskovalnega, razvojnega in pedagoškega dela.

Intended learning outcomes:

Knowledge and understanding: the candidate acquires the qualification for independent research work in the research area. He masters the contemporary research methods and the conduction of applicative and basic research. He acquires the skills of academic presentations and the argumentation of his position. He also understands the techniques and the importance of linking of research, developmental and pedagogical work.

Metode poučevanja in učenja:

Izbrana poglavja določenih vsebin (predavanja ali konzultacije), voden seminar, izdelava seminarskega dela in njegov zagovor, sodelovanje pri raziskovalnem delu nosilca.

Learning and teaching methods:

Selected chapters of certain contents (lectures or consultations), guided seminary, elaboration of seminary work and its defence, participation in the research work of a lecturer.

Načini ocenjevanja:	Delež/Weight	Assessment:
Ocena izpita je sestavljena iz: - seminarja in njegovega zagovora	50,00 %	Exam grade consists of: - seminar and its defence
- ustnega izpita.	50,00 %	- oral exam.

Ocenjevalna lestvica:	Grading system:
5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10	5 - 10, a student passes the exam if he is graded from 6 to 10

Splošni pogoji za vpis na doktorski študij.	General conditions for enrolment in doctoral studies.

Vsebina:	Content (Syllabus outline):
Detekcijske metode škodljivih organizmov. Diagnostične metode za določevanje vrstne pripadnosti fitopatogenih organizmov: tradicionalne tehnike (simptomatika, morfološko anatomske, selektivni mediji); biokemične tehnike (substratni metabolizem, profil maščobnih kislin, analiza proteinov, analiza nukleinskih kislin), molekulska detekcija. Izolacije in identifikacija fitopatogenih mikrobov (različne tehnike) iz posameznih rastlinskih	Methods of detecting harmful organisms. Diagnostic methods for determining species affiliation of phytopathogenic organisms: traditional techniques (symptomatic, morphological anatomic, selective media); biochemical techniques (substrate metabolism, profiles of fatty acids, protein analysis, analysis of nucleic acids), molecular detection. Isolation and identification of phytopathogenic microbes (various techniques) from individual plant

<p>delov in substratov. Kochovi postulati v fitopatologiji – potrjevanje povzročitelja bolezni. Načini vzorčenja in hranjenja škodljivih organizmov (s poudarkom na žuželkah in ogorčicah) in mikrobov pred determinacijo (maceracija, dehidracija, koncentracija, RNA/DNA ekstrakcija, PCR, sekvenciranje) in po njej (priprava preparatov...). Uporaba morfoloških determinacijskih ključev izbranih skupin škodljivih žuželk in fitoparazitskih ogorčic: opisni, opisno-slikovni, slikovni morfološki ključi. Uporaba sodobnih pristopov sekvenciranja za natančno zaznavanje patogenih mikrobov rastlin. Telesni deli škodljivih organizmov (glav, oprsje, zadek idr.), pomembni za morfološko determinacijo. Genetski identifikacijski ključi škodljivih organizmov. Pravilna izbira posameznih diagnostičnih tehnik: prednosti in slabosti. Pomen detekcije in determinacije v preprečevanju širjenja karantenskih škodljivih organizmov.</p>	<p>parts and substrates. Koch's postulates in phytopathology – confirming the causative agents of illness. Methods of sampling and storing harmful organisms (with a stress on insects and nematodes) and microbes prior to determination (maceration, dehydration, concentration, RNA/DNA extraction, PCR, sequencing etc.) and after (preparing preparation). Using morphological identification keys of selected groups of harmful insects and phytoparasitic nematodes: descriptive, descriptive-pictorial, pictorial morphological keys. Modern sequencing approaches for untargeted detection of plant microbial pathogens. Body parts of harmful organisms (heads, chests, abdomen etc.) important for morphological identification. Genetic identification keys of harmful organisms. Correct choice of individual diagnostic techniques: advantages and weaknesses. Importance of detection and determination in preventing the spread of quarantine pests.</p>

revijalni članki s področja, tekoča periodika, druga učna gradiva...

Cilji in kompetence:

Temeljni izobraževalni cilj je poglobitev znanja za samostojno delo na področju detekcije in morfološke ter molekulske determinacije izbranih skupin škodljivih žuželk, ogorčic, fitopatogenih gliv, virusov, bakterij in fitoplazem.

Objectives and competences:

The basic educational aim is to deepen knowledge for independent work in the field of detection and morphological and molecular determination of selected groups of harmful insects, nematodes, phylogenetic fungi, viruses, bacteria and phytoplasmas.

Predvideni študijski rezultati:

Predviden študijski rezultat je kandidata usposobiti za detekcijo in determinacijo izbrane skupine ali skupin škodljivih organizmov, z namenom uporabe omenjenih znanj v raziskovalnem ali aplikativnem delu.

Intended learning outcomes:

The intended learning outcome is to train the candidate in the detection and determination of a selected group or groups of harmful organisms, with the intention of using this knowledge in research or applied work.

Metode poučevanja in učenja:

Predavanja, seminarji, konzultacije, samostojno delo.

Izvajalci predavanj: doc. dr. Jože Kropivšek

Izvajalci seminarjev:

Izvajalci vaj:

Izvajalci kliničnih vaj:

Izvajalci drugih oblik:

Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: teoretični/theoretical

Jeziki/Languages:

Predavanja/Lectures:

Angleščina, Slovenščina

Vaje/Tutorial:

Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Splošni pogoji za vpis na doktorski študij

Prerequisites:

General requirements for admission to doctoral programme.

Vsebina:

- Digitalni poslovni modeli v biotehnik
 - Zasnova in razvoj digitalnih poslovnih modelov
 - Sestavine in razvoj strategij digitalizacije
- Management poslovnih procesov v biotehnik
 - Strateški in operativni management poslovnih procesov, vključno z modeliranjem

Content (Syllabus outline):

- Digital business models in Biosciences
- Design and development of digital business models
- Components and development of digitization strategies
- Business process management in Biosciences
- Strategic and operational management of business processes, including modeling and

<p>in optimizacijo (z upoštevanjem možnosti digitalizacije)</p> <ul style="list-style-type: none"> • Izzivi sodobnega managementa podjetij vključujoč sodobna orodja finančne analize • Digitalizacija poslovnih procesov v biotehnikih <ul style="list-style-type: none"> • Koncept Industrija 4.0 in njegova implementacija v podjetjih v biotehnikih • Model digitalnih kompetenc ključnih kadrov in managerskih digitalnih kompetenc <p>Motiviranje zaposlenih v digitalni dobi</p>	<p>optimization (taking into account the possibilities of digitalization)</p> <ul style="list-style-type: none"> • Challenges of modern business management including modern financial analysis tools • Digitalization of business processes in Biosciences • The Industry 4.0 concept and its implementation in Biosciences • Model of digital competencies of key personnel and managerial digital competencies <p>Motivating employees in the digital age</p>

DINAMIKA MIKROBNIH GENOMOV

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Dinamika mikrobnih genomov
Course title:	Dynamics of microbial genomes
Članica nosilka/UL	UL BF
Member:	

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Bioznanosti, tretja stopnja, doktorski (v postopku)	Ni členitve (študijski program)		Celoletni	izbirni

Univerzitetna koda predmeta/University course code:	0566747
Koda učne enote na članici/UL Member course code:	0

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
10	20	0	0	0	95	5

Nosilec predmeta/Lecturer: prof. dr. Marjanca Starčič Erjavec

Izvajalci predavanj: prof. dr. Marjanca Starčič Erjavec, Darja Žgur Bertok
Izvajalci seminarjev:
Izvajalci vaj:
Izvajalci kliničnih vaj:
Izvajalci drugih oblik:
Izvajalci praktičnega usposabljanja:

Vrsta predmeta/Course type: teoretični /theoretical

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Splošni pogoji za vpis na doktorski študij.	General criteria for enrollment in PhD studies

Vsebina: Dinamika mikrobnih genomov z različnimi prerazporeditvami in horizontalnimi prenosi DNA ter evolucija novih patogenov. <ul style="list-style-type: none">Mutageneza, rekombinacija in horizontalni prenosi DNA.Struktura genomov, stalni in pogrešljivi deli genomov, pangenom.Genomski otoki, otoki patogenosti, metagenomski otoki.	Content (Syllabus outline): Dynamics of microbial genomes including DNA rearrangements along with horizontal DNA transfer and evolution of novel pathogens. <ul style="list-style-type: none">Mutagenesis, recombination and horizontal DNA transfer.Genome structure, core and dispensible genome, pang genome.Genomic islands, pathogenicity islands, metagenomic islands.
--	--

<ul style="list-style-type: none"> • Mobilni genetski elementi in mehanizmi horizontalnih prenosov DNA (transpozoni, plazmidi, integrativni konjugativni elementi, virusi). • Obrambapredujo DNA. 	<ul style="list-style-type: none"> • Mobile genetic elements and mechanisms of in horizontal DNA transfer (transposons, plasmids integrative conjugative elements, viruses). • Defense mechanisms protecting against foreign DNA.
---	---

Temeljna literatura in viri/Readings:

Raziskovalni in pregledni članki, ki so javno dostopni preko spleta/Research and review papers, available online on the Internet.

Cilji in kompetence:

Cilj predmeta je povezati razumevanje strukture genomov in genetskih elementov z mehanizmi, ki omogočajo dinamiko mikrobnega genoma ter dejavniki okolja, ki vplivajo na to dinamiko. Vsebine predmeta so nadgradnja celično-bioloških, biokemijskih in genetskih predmetov na 1. in 2. stopnji. Pridobljena znanja dajejo študentom osnovo za poglobljeno razumevanje dinamike mikrobnih genomov, potrebno za njegovo doktorsko disertacijo.

Objectives and competences:

The goal of the course is for students to understand the connection of the structure of genomes and genetic elements with the mechanism that conduct the dynamics of the microbial genomes and environmental factors that affect the dynamics of genomes.
The course content is an upgrading of first and second level courses dealing with cell biology, biochemistry and genetics. The obtained knowledge will provide the student an in depth understanding of the dynamics of microbial genomes that is required for his/her PhD thesis.

Predvideni študijski rezultati:

Znanje in razumevanje:
Študent bo pridobil znanje in razumevanje o strukturi genomov, genetskih elementih in mehanizmih horizontalnega genskega prenosa, njihovi uravnavi ter dejavnikih okolja, ki vplivajo na dinamiko mikrobnih genomov

Intended learning outcomes:

Knowledge and understanding:
Students will acquire the knowledge and understanding of genome structure, genetic elements and mechanism of horizontal gene transfer, the regulation and the environmental factors that shape the dynamics of microbial genomes.

Metode poučevanja in učenja:

Pouk je organiziran s predavanji, konzultacijami; seminarsko delo.

Learning and teaching methods:

Lectures, consultations, seminar.

Načini ocenjevanja:

	Delež/Weight	Assessment:
izpit	50,00 %	exam
seminar	50,00 %	seminar

Ocenjevalna lestvica:

5 - 10, pri čemer velja, da je pozitivna ocena od 6 - 10

Grading system:

5 - 10, a student passes the exam if he is graded from 6 to 10
